Issue: Under certain circumstances, there is a possibility that over time liquid can intrude into the high voltage battery of certain vehicles. Over time, if a sufficient amount of conductive liquid accumulates in the battery, arcing can occur, which could increase the risk of a thermal event.

Precautions: If liquid enters the battery, a drop in insulation resistance results. If the insulation resistance value drops below a defined threshold over time, a yellow warning message is displayed in the vehicle. If the insulation value continues to drop below a defined threshold over time, a red warning message is displayed in the vehicle.

Customers experiencing this situation are advised to contact their authorized Audi dealer without delay for an appointment to have the vehicle diagnosed. As a reminder, the vehicle owner’s manual contains important information regarding the vehicle’s warning lights and messages. We encourage anyone who drives the vehicle to review the owner’s manual to become familiar with the types of vehicle indicators, warnings and messaging they may see.
