PUMA PAUSE TRAILER

BRAKE WIRING INSPECTION PROCEDURE

INTRODUCTION

The **Puma Pause** (20.2 & 20.3) Independent Suspension System has four (4) individual hubs/axles attached to four (4) independent swing-arms. The inspection interest can be found at the point where each electric brake wire exits from each swing-arm.

FLOORPLAN	ITEM TO BE INSPECTED	ITEM LOCATION	NUMBER OF LOCATIONS
Puma Pause Trailer 20.2 & 20.3	Brake Wire	Independent Suspension Point of brake wire exit from each swing-arm	Per trailer - four (4)

INSPECTION

Step 1

On each of the four (4) swing-arms, locate the exit point for the electric brake wire.

Above. Beyond. Always.

PUMA PAUSE TRAILER

BRAKE WIRING INSPECTION PROCEDURE

INSPECTION CONTINUED

Once located, forward of the wire (butt) connectors, firmly grasp the wire with two or three fingers; push the wire in (toward the front of the trailer) and pull the wire back (toward the rear of the trailer) with enough force to determine whether or not the wire is able to freely move forward and rearward in the swing-arm. Note the while the length of movement may vary, the inspection interest is specific to free range of non-forced movement.

Step 2

IF free (non-forced) fore and aft (longitudinal) motion is present – no further action is required.

IF free (non-forced) fore and aft (longitudinal) motion is NOT present OR brake wire is severed/pulls out of swing-arm – Contact **Forest River Puma Pause Customer Service**.
