Subject: Single Modulator Valve Standard Warranty Policy Extension for Recall FL958 & FL966 Vehicles.

FL958 (NHTSA Recall 22V-817)

FL966 (NHTSA Recall 23V-073)

Dear Customer,

DTNA previously informed you of a recall related to the brake modulator valves on your vehicle(s). On the affected vehicle(s), the single brake modulator valves may corrode, which, during a braking event, could lead to a brake pull. This may result in a sudden change in vehicle direction due to uneven braking on the front axle, increasing the risk of a motor vehicle crash. DTNA is now adjusting the repair strategy for these recalls.

Your vehicle(s) is eligible to have a diagnostic software solution installed. The diagnostic software continuously checks for an emerging failure in the valve and will provide the driver with an in-vehicle alert if a developing valve failure is detected. A DTNA authorized service facility will install the diagnostic software. The Recall will take approximately one hour and will be performed free of charge.

Should the brake modulator valve later need to be replaced, vehicles that previously received the software solution now have their part standard warranty extended and the parts and labor for the replacement will be provided at no cost. The standard warranty extension will be in place for **10 years** from the vehicle's in-service date.

The following parts are covered under this extension of standard warranty:

Part Number	Part Description
WAB 472 196 025 0	SOLENOID-ABS MODULATOR VALVE
WAB 472 196 037 0	SOLENOID-ABS MODULATOR VALVE
WAB 472 196 046 0	SOLENOID-ABS MODULATOR VALVE
WAB 472 196 051 0	SOLENOID-ABS MODULATOR VALVE

If you have questions regarding this communication, please contact the DTNA Campaign Group at: dtna-war-campaigns@daimlertruck.com

Thank you.
