Description of Defect :

Description of the Defect : The defect is a result of debris entering the area where the front harness adjuster is located. The debris may cause the teeth of the adjuster mechanism to no longer properly clamp onto the adjuster strap, resulting in the harness no longer remaining tight.

FMVSS 1 : NR

FMVSS 2 : NR

Description of the Safety Risk : If a child restraint harness is not tight in a crash, the child could be injured.

Description of the Cause : Debris in the teeth of the adjuster mechanism.

Identification of Any Warning that can Occur : Harness does not remain tight when caregiver checks for harness tightness while placing child in seat.

Involved Components :

Component Name : Child Seat

Component Description : Harness

Component Part Number : Front Adjuster Button/Release Mechanism

Supplier Identification :

Component Manufacturer

Name : Nuna Baby Essentials Inc

Address : 70 Thousand Oaks Boulevard

Morgantown Pennsylvania 19543
Country : United States

Chronology :

Nuna and NHTSA received complaints related to tightening or harness loosening through the harness adjuster mechanism. In May 2024, NHTSA opened an investigation after receiving a defect petition (DP24003). NHTSA opened PE24-026 on October 24, 2024. Nuna has decided to conduct a voluntary safety recall for Rava child restraint systems manufactured within the designated timeframe. There are no injuries or fatalities reported in connection with this issue.

Description of Remedy :

Description of Remedy Program : Nuna intends to provide consumers with a free remedy kit. The remedy kit consists of (i) a new seat pad (including installation instructions), (ii) instructions for checking harness functionality, and (iii) if harness functionality is impaired, instructions for properly cleaning the harness adjuster area. The new seat pad design will cover the plastic escutcheon area and help prevent debris from entering the harness adjuster mechanism. If cleaning is necessary, the kit also includes a screwdriver to remove and then replace the plastic cover (escutcheon) that is located over the harness adjuster, and a plastic brush with stiff bristles and a flat end to clean the harness adjuster's teeth and clear any debris from the affected area. The instructions will state that any customer with a malfunctioning harness that is unable or unwilling to perform the cleaning of the harness adjuster area can contact Nuna for additional assistance and cleaning at no charge.

How Remedy Component Differs from Recalled Component : The new seat pad design will cover the plastic escutcheon area and help prevent debris from entering the harness adjuster mechanism.

Identify How/When Recall Condition was Corrected in Production : Production of the recalled models ended in October 2023.
