<td>Some 2018-2021 MY Chrysler 300 vehicles may have been built with a SABIC inflator that may rupture.</td>
</tr>
</tbody>
</table>

The suspect period began on July 5, 2018, when SABICs with suspect inflators were introduced into vehicle production, through May 19, 2021, when SABICs with suspect inflators were no longer used in vehicle production. The vehicle population was determined through SABIC inflator traceability records and vehicle production records.

Similar vehicles not included in this recall were built with SABICs that did not contain a suspect inflator.

The total affected vehicles for this model is 67,180.

**Production Dates:** JUL 05, 2018 - MAY 19, 2021

**Description of Defect:**

- **Description of the Defect:** A SABIC inflator rupture may result in compressed gas rapidly escaping from the inflator and material potentially being propelled into the vehicle.
- **FMVSS 1:** NR
- **FMVSS 2:** NR
- **Description of the Safety Risk:** Material being propelled into an occupied vehicle may cause injury.
- **Description of the Cause:** NR
- **Identification of Any Warning that can Occur:** None

**Involved Components:**

- **Component Name 1:** Right Side Curtain
- **Component Description:** Airbag
- **Component Part Number:** 68222742AG

The information contained in this report was submitted pursuant to 49 CFR §573

### Supplier Identification:

**Component Manufacturer**

- **Name**: JOYSON SAFETY SYSTEMS
- **Address**: 2025 Harmon Road
  Auburn Hills Michigan 48326
- **Country**: United States

### Chronology:

- **On February 17, 2023**, the FCA US LLC ("FCA US") Technical Safety and Regulatory Compliance ("TSRC") organization opened an investigation into some 2018-2021 MY Dodge Charger and Chrysler 300 vehicles that may have been built with a suspect SABIC inflator that may rupture.

- **From February 17, 2023**, through February 20, 2024, FCA US TSRC conducted an analysis of SABIC inflator ruptures and determined that the affected vehicles may have had moisture introduced into the inflator during supplier manufacturing that may cause internal corrosion over time and potentially leading to Stress Corrosion Cracking ("SCC") in the inflator.

- **As of February 21, 2024**, FCA US is aware of five customer assistance records, two warranty claims, and 0 field reports potentially related to this issue for all markets with dates of receipt ranging from February 17, 2023, to February 12, 2024.

- **As of February 21, 2024**, FCA US is not aware of any accidents or injuries potentially relating to this issue for
all markets.

- On March 7, 2024, FCA US determined, through the Vehicle Regulations Committee, to conduct a voluntary safety recall of the affected vehicles.

### Description of Remedy:

- **Description of Remedy Program:** FCA US will conduct a voluntary safety recall on all affected vehicles to replace both SABIC modules.

  FCA US has a longstanding policy and practice of reimbursing owners who have incurred the cost of repairing a problem that subsequently becomes the subject of a field action. To ensure consistency, FCA US, as part of the owner letter, will request that customers send the original receipt and/or other adequate proof of payment to the company for confirmation of the expense.

- **How Remedy Component Differs from Recalled Component:** The remedy component will be a SABIC module built with an inflator outside the suspect period.

- **Identify How/When Recall Condition was Corrected in Production:** NR

### Recall Schedule:

- **Description of Recall Schedule:** **03/14/2024:** FCA US will notify dealers and begin notifying owners on or about 05/03/2024.

  **Planned Dealer Notification Date:** MAY 03, 2024 - MAY 03, 2024

  **Planned Owner Notification Date:** MAY 03, 2024 - MAY 03, 2024

* NR - Not Reported
