

New Safety Recall Advanced Communication – 33B

FCA US LLC (FCA US) has announced a safety recall on certain 2023 and 2024 (DT) Ram 1500 Pickups.

REASON FOR THIS SAFETY RECALL

Some of the above vehicles may have been built have been built with a steering column control module ("SCCM") with an insufficient weld between an internal flexible flat cable ("FFC") and busbar. The SCCM in the suspect vehicles may not allow a deployment signal from the Occupant Restraint Controller to reach the driver airbag module, preventing airbag deployment during these events. An airbag that does not deploy when intended may result in increased risk of injury to the driver in certain crashes.

The condition described above does not comply with Federal Motor Vehicle Safety Standard (FMVSS) No. 571.208 requires driver's airbag deployment during certain crash events.

SERVICE ACTION

FCA US will conduct a voluntary safety recall to inspect and, if necessary, replace the steering column control module. The remedy for this condition is not currently available. Dealers will be notified of the launch of this safety recall by way of established communication methods. This recall is estimated to launch in 2nd Quarter of 2024.

We ask that you please take the time to ensure that your personnel are aware of this communication and are prepared to execute a customer friendly process for inquiries regarding involved vehicles.
