Subject: NOVA BUS: DO NOT DRIVE NOTICE
Date: Thursday, May 9, 2024 9:45:35 AM
Importance: High

Hello,

The Nova Bus Product Safety Committee has voted this morning that the fuel leak from the fuel line at the secondary fuel filter issue (MQR-2810) was a safety related defect. The committee also determined that **owners must be notified and instructed to not drive their vehicles until recall repairs have been completed in advance of the official recall notice.**

Here's a high level summary of the issue:

Description:

- The subject vehicles may have been built with fuel hoses for the secondary remote fuel filter that may disconnect. In the event of a fuel hose disconnection, the engine may shutdown and a fuel spillage may occur. An unexpected engine shutdown can increase the risk of a crash.

Affected market

- Buses equipped with remote secondary fuel filter
- Equipped with engines built between December 2022 and March 2023
- Engine serial numbers provided by Cummins to allow traceability
- Nova Bus production between January 2023 and March 2024 (Green OK dates)

Notification release schedule

- Owner notification letters will be released on or before July 6th 2024.
- Repair Instruction will be released once they are available.

Affected buses in your fleet:

Order	Unit No.	Road No.	Engine Serial No.	Vehicle Id.
