

New Safety Recall Advanced Communication – 70B

FCA US LLC (FCA US) has announced a safety recall on certain 2023 model year (WL) Grand Cherokee vehicles.

REASON FOR THIS SAFETY RECALL

Some of the above vehicles may have been built with a second-row seatbelt buckle with an insufficiently torqued fastener, which may result in reduced occupant restraint capabilities. Reduced load management by the seat belt buckle may result in injury to vehicle occupants in certain types of crashes.

The condition above fails to conform to the requirements of Federal Motor Vehicle Safety Standard (FMVSS) No. 210 S4.2.4 requires that, "Anchorages, attachment hardware, and attachment bolts shall be tested by simultaneously loading them in accordance with the applicable procedures "[...]". A seat belt buckle fastener that is insufficiently torqued may reduce load management capability and occupant restraint effectiveness, which may not be compliant to FMVSS 210.

SERVICE ACTION

FCA US will conduct a voluntary safety recall on all affected vehicles to inspect and, if necessary, torque the second row seat buckle bolt to the proper torque specification. The remedy for this condition is not currently available. Dealers will be notified of the launch of this safety recall by way of established communication methods. This recall is estimated to launch in 2nd Quarter of 2024.

We ask that you please take the time to ensure that your personnel are aware of this communication and are prepared to execute a customer friendly process for inquiries regarding involved vehicles.
