

- Fit the clutch master cylinder to the new pedal box using a tilting motion as shown.

- Fit the clutch master cylinder retaining bolt to the new pedal box and tighten to **24Nm** using a Allen Key socket and torque wrench.

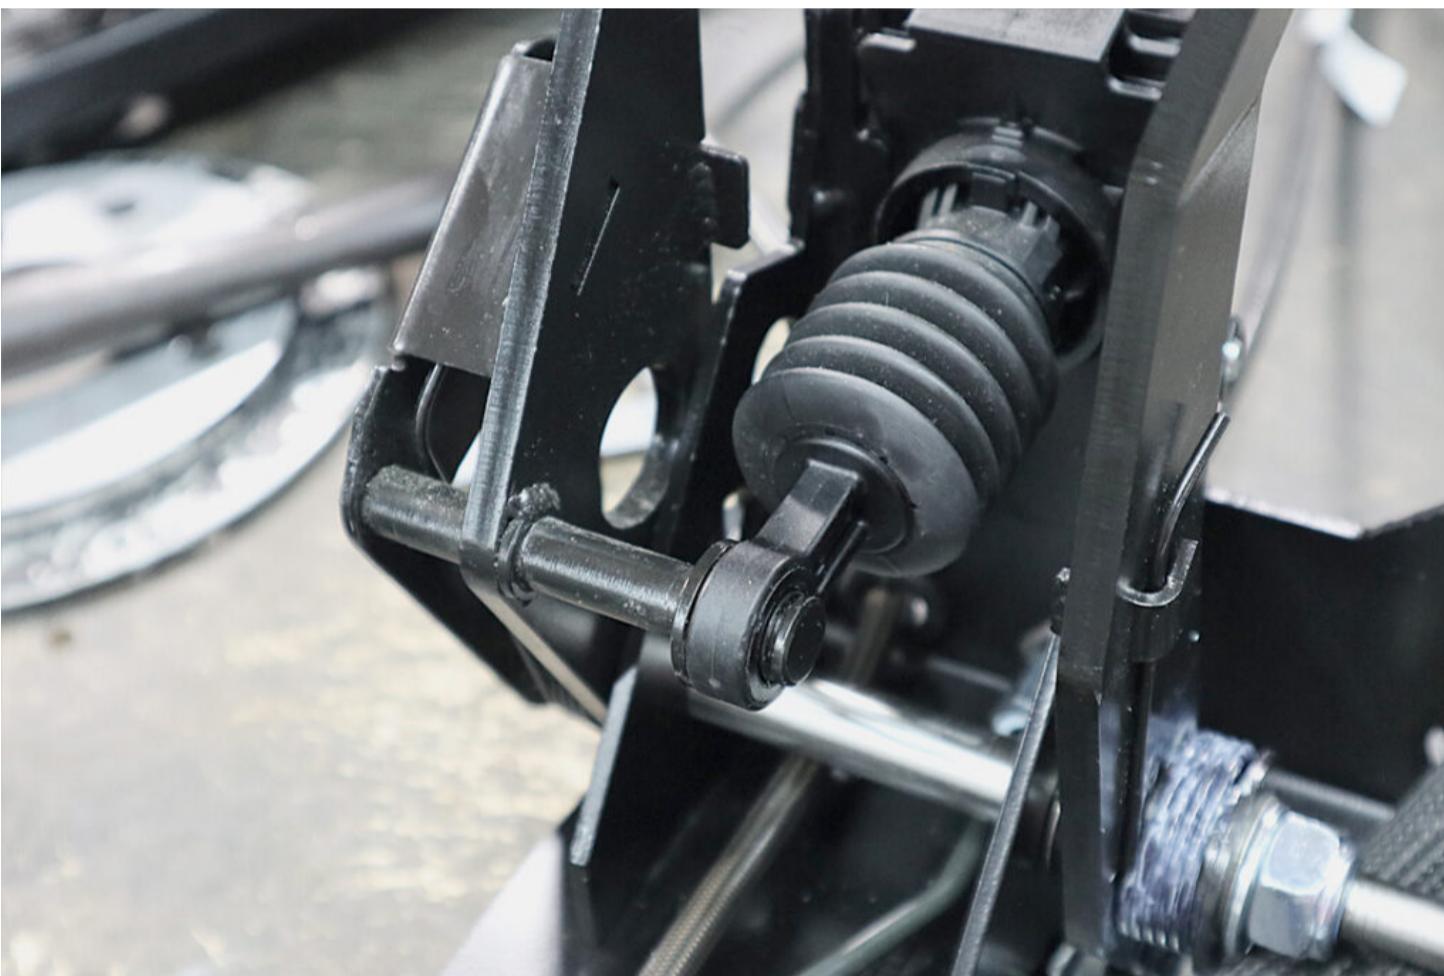

- Apply Loctite 243 to the clutch retaining bolt.

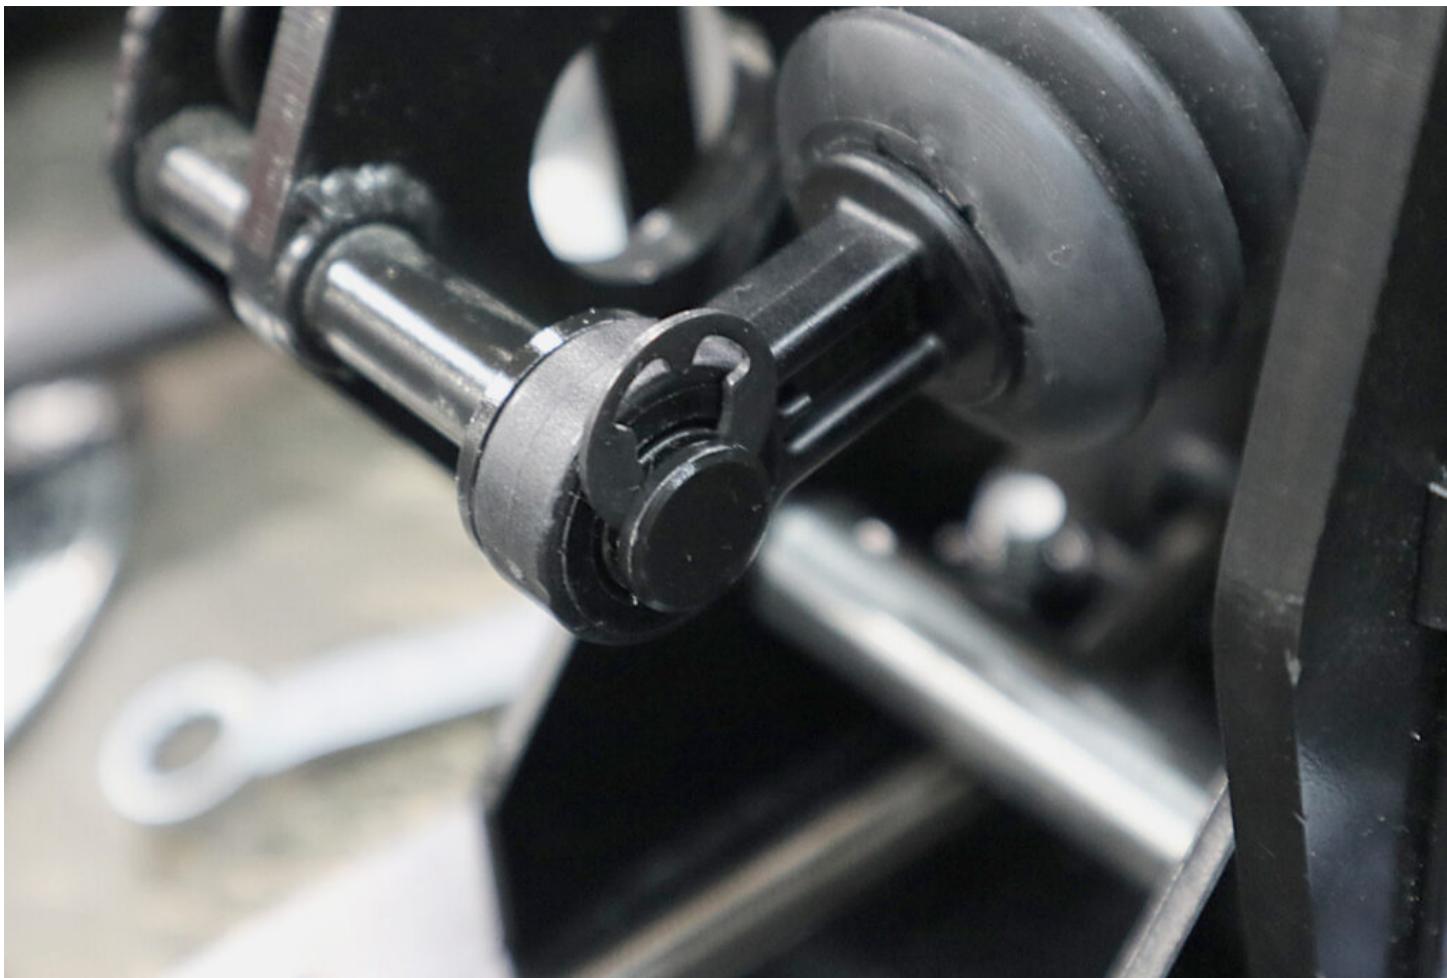

- Fit the old clutch pedal to the new pedal box, fit the clutch pedal retaining bolt and tighten to **10Nm** using a 10mm socket and torque wrench.

Make sure the clutch pedal return spring is located correctly in the pedal box.

- Fit the pedal clevis pin into the clutch master cylinder.

- Fit the new circlip (as supplied as of part of the kit) using pliers.
