IMPORTANT SAFETY RECALL

FREE MAINTENANCE INSPECTION & OIL CHANGE

Only for models affected by Front Brake Master Cylinder part replacement,
Suzuki recall campaign 3A04

Why did you get this email?

Suzuki Motor Corporation has decided that a defect which relates to motor vehicle safety exists in certain 2022 through 2024 Hayabusa (GSX1300RM2-M4) motorcycles.

The front brake master cylinder reservoir cap diaphragm contains an additive that can affect the brake fluid and cause rubber parts inside the master cylinder to swell. If this occurs, proper brake fluid pressure may be affected, and the brake lever may require greater than normal travel in a subsequent application of the front brake. This can lead to extended stopping distances, increasing the risk of a crash.
