**Description of Defect :**

Description of the Defect : The defect is an interior laminated step that can break at the laminated joints.

FMVSS 1 : NR

FMVSS 2 : NR

Description of the Safety Risk : The step tread can break, while in use, increasing the risk of fall and injury.

Description of the Cause : The step treads are laminated hardwood. If the laminated joint aligns with the step riser, the joint of the step tread may be unsupported. This can result in the step tread breaking.

Identification of Any Warning that can Occur : There may be some noticeable separation at the lamination joint on the step tread, prior to failure. Due to the nature of the texture on the step tread, there is not always a noticeable warning.

Engineers are currently testing for an actionable solution.

### Description of Remedy :

Description of Remedy Program : Grand Design will reinforce the current step tread with a metal bracket that will reduce the overhang of the step and ensure the ability of the step to withstand a load of at least 900lbs. Owners that have paid to have this service performed will be reimbursed by Grand Design for any expenses incurred related to the defect.

How Remedy Component Differs from Recalled Component : Remedy components are distinguished from the recalled component because they are a composite material. Recalled components are laminated hardwood.

Identify How/When Recall Condition was Corrected in Production : Production has redesigned the steps and no longer uses laminated step tread. Changes were implemented August 2023.
