Description of Defect :

Description of the Defect : Mercedes-Benz AG (“MBAG”), the manufacturer of Mercedes-Benz vehicles, has determined that on certain Model Year (“MY”) 2023-2024 C-Class (206 platform), S-Class (223 platform), SL (232 platform), GLC (254 platform), EQE SUV (294 platform), EQE (295 platform), EQS SUV (296 platform) and EQS (297 platform) vehicles, the fuse boxes might have been reworked incorrectly during a previous recall remedy (24V-115).

FMVSS 1 : NR

FMVSS 2 : NR

Description of the Safety Risk : As a result, a contact interruption or installation of fuses with incorrect amperage values for the designated location might occur. In this case, systems connected to the fuse might become inoperable. Potential consequences might include the loss of vehicle propulsion without warning, impairment of restraint functions, and of the instrument cluster, which could increase the risk of a crash and injuries. In addition, a risk of fire cannot be ruled out.

Description of the Cause : When the recall remedy was performed for 24V-115, some dealer technicians may have inadvertently installed fuse boxes not specified for the affected vehicle.

Identification of Any Warning that can Occur : Before the issue occurs, the driver will not receive a warning due to the nature of the failure mechanism.

Chronology :

In February 2024, MBAG initiated recall 24V-115 to address certain fuses that might not meet production specifications.

In mid-March 2025, MBAG was made aware of a field case, from outside the USA, indicating a potential defect on the fuse box. During the analysis, it was determined that the vehicle had been reworked as part of a recall regarding fuse boxes. Further analysis revealed that it had been equipped with a fuse box not intended for that specific vehicle model. Thorough analyses of the recall indicated that other workshops had potentially installed incorrect fuse boxes during the recall repair, as well. Through the end of March 2025, MBAG evaluated which vehicles were potentially incorrectly serviced.

During the root cause analysis, ambiguities in the parts ordering system were identified and corrected.

Additionally, information on the correct use of the parts ordering system was distributed to dealers. On April 11, 2025, MBAG decided to conduct a recall.

MBAG can confirm there are no warranty claims, field or service reports, and other information (such as the numbers of deaths and/or injuries) related to this defect in the USA.

Description of Remedy :

Description of Remedy Program : An authorized Mercedes-Benz dealer will check and replace the respective main fuse box on the affected vehicles.

Pursuant to 49 C.F.R. § 577.11(e), MBUSA does not plan to provide notice about pre-notice reimbursement to owners since none of the involved vehicles would have been previously subject to the condition described and all remain covered under the new vehicle warranty.

How Remedy Component Differs : Vehicles outside of the recall population have a fuse box according to

from Recalled Component : current production specifications.
