Recall 026G Instrument Cluster Logic Unit (CLU) Software Update Issues for GV70 Event 1218

Genesis Motor America (GMA) has noted some retailers are having issues with GDS Smart application not recognizing Event 1218 as available for Recall 026G.

The issue impacted GV70 VINs starting with "K", but has now been resolved. The resolution will require a close and restart of the GDS Smart application for the changes to take effect.

Please completely close the GDS Smart and STUI applications and restart the applications and ensure that internet connectivity is available for the changes to be downloaded to the tablet. Thank you for your patience.
