Re: Motiv Technical Bulletin for the following recall notices

- 25v137 – TPS Wire Crimp (Non School Bus)
- 25v138 – TPS Wire Crimp (School bus)
- 2025-112 – TPS Wire Crimp (Transport Canada)

RECALL INFORMATION

Motiv Power Systems, Inc. has determined that on certain vehicles converted to a Motiv electric powertrain, a Throttle Position Sensor (TPS) power wire connector pin at the Powertrain Control Module (PCM) connector could loosen over time, potentially resulting in loss of connection and loss of TPS signal to the PCM. This, in turn could result in a loss of vehicle propulsion. To ensure that these vehicles meet Motiv's stringent quality requirements, follow the instructions outlined below to inspect all potentially affected vehicles and correct or replace any 12-volt control wires showing signs of fatigue, cracking, or improper retention or protection.

VEHICLES AFFECTED

Ford E-450 and F-59 cutaway and stripped chassis, MY 2017 through 2020, converted to Motiv Gen 4 E-450 and F-59 battery electric powertrain, with different body types.

Ford E-450, F-59, and F-53 cutaway and stripped chassis, MY 2020 through 2023, converted to Motiv Gen 5 E-450, F-59, and F-53 battery electric powertrain, with different body types.

Ford F-59 and F-53 stripped chassis, MY 2023 through 2025, converted to Motiv Gen 6 F-59, and F-53 battery electric powertrain, with different body types.

VEHICLE QUANTITY

There are 324 vehicles affected by this recall (262 U.S, 57 Canada).

REPAIR INSTRUCTIONS

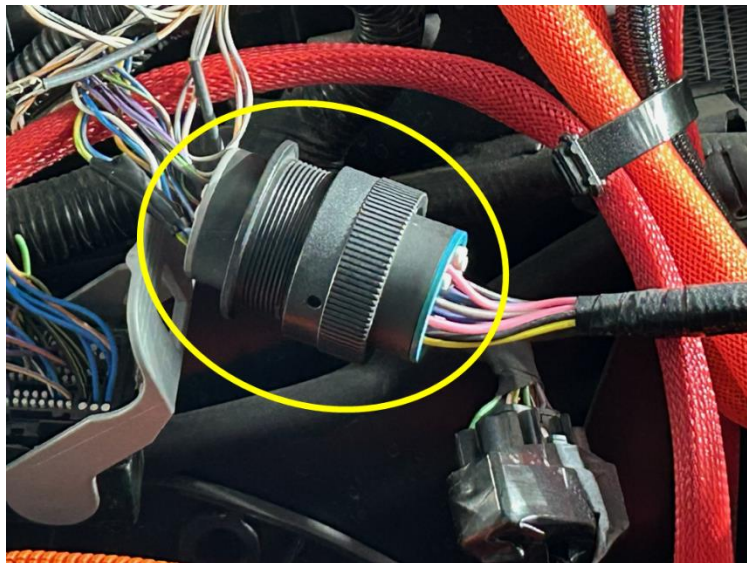

1. Turn the mater disconnect switch to the OFF position and wait for five (5) minutes for the vehicle to completely de-energize.

ON position

OFF position

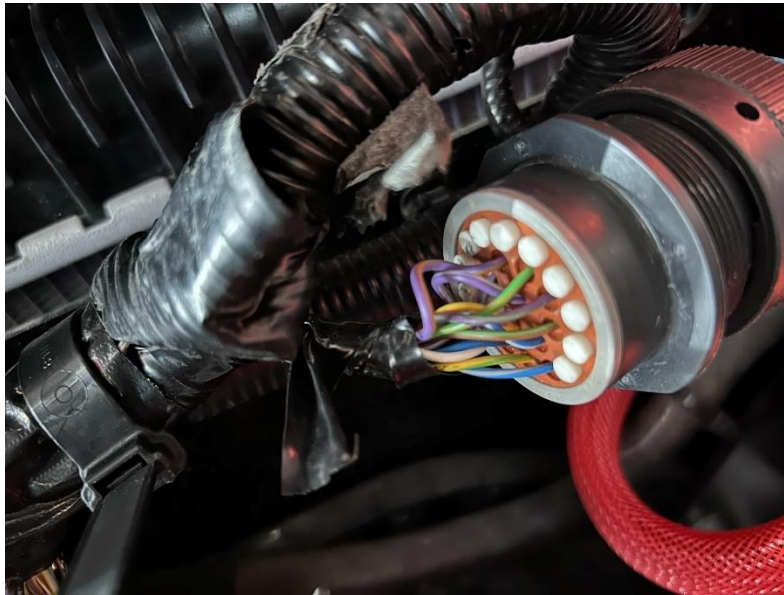

2. Disconnect the positive lead to the 12v battery.
3. Locate the PCM (P2) connector under the hood.

4. Perform a pull test on the wires going into the connector from the Motiv PCM harness.
 - 4.1 Calibrate hand pull testing with 5, 10 and 15 lb. weights tied to 20AWG GXL wire.

PROPRIETARY AND CONFIDENTIAL

- 4.2 Remove convoluted wrap and electrical tape from the Motiv harness end of the PCM connector.
- 4.3 Pull test each wire in the PCM connector with 5-15 lbs. of force – DO NOT EXCEED 15 LBS OF FORCE.

- 4.4 If any wires pull out, butt splice 6 inches of new GXL-20 wire (P/N 500-10436-XXX) with a male Deutsch terminal (160-108936-001) on the end. Remove the pulled-out contact from the connector housing and insert the new wire. Send the pulled-out contact to Joshua Sealand in Foster City for analysis.
- 4.5 Reapply convoluted wrap and electrical tape.
5. Reinstall the positive lead to the 12V battery.
6. Turn on red switch.
7. Turn on key and test drive vehicle.
