**From:** Product Safety & Certification

**Subject:** RVXX2601 Potential Vehicle Roll with Parking Brake Engaged

### Description of Defect:

Certain Volvo VNL(4) vehicles that are equipped with electronically controlled suspensions and are not equipped with auxiliary parking brakes may experience insufficient parking brake holding force due to weight biasing. In weight-bias mode, the drive axle equipped with parking brakes may lose sufficient downforce to hold the vehicle stationary, increasing the risk of a vehicle rollaway.

Vehicles that do roll away could potentially result in equipment damage and/or crash.

### Models/ Model Years Affected:

Certain VNL (4) model vehicles manufactured from 10/2/2023, through 2/4/2026.

### Vehicle Quantities:

800 vehicles

### Dealer's Responsibility:

The National Traffic and Motor Vehicle Safety Act and Canadian Motor Vehicle Safety Act require dealers to ensure that all new and used vehicles are free of safety defects and comply with all relevant safety standards at the time of delivery to the consumer.

Dealers should make their personnel aware of the safety recall. In the event that a dealer has a vehicle included in the safety recall in their inventory to be sold, the condition must be corrected before releasing it to a customer.

### Release Schedule:

- Vehicle list will be posted on the Trucks Dealer Portal 2/17/2026.
- Owner notification letters will be released on or before 4/10/2026.
- Repair instruction will be released once they are available.

If you have questions or concerns about this recall, contact the Regulatory Affairs Department at [vtna.regulatoryaffairs@volvo.com](mailto:vtna.regulatoryaffairs@volvo.com).
