Recall 033G - Fuel Crossover Pipe - Retailer Notification (Remedy Available).(posted 06.26.26).(002).pdf

Genesis Motor America (HMA) has launched Remedy Available for Recall 033G: Fuel Leak & Flare Nut Torque Inspection – Crossover Pipe Replacement.

A “stop sale” has been issued on affected new vehicles in retailer’s inventory. As required by federal law, retailers must not deliver new vehicles for sale or for lease to customers until all open recalls have been performed. Retailers must perform all open recalls on used vehicles, demo, and rental vehicles prior to placing them into customer use and whenever an affected vehicle is in the shop for any maintenance or repair.

A. Recall Description:

Certain vehicles equipped with the 3.5L T-GDI Lambda III engine crossover fuel pipe connecting the left and right fuel rails of the engine may have been installed with retention fasteners that can gradually loosen over time. A fuel pipe with loose connections could allow fuel to leak, increasing the risk of an engine compartment fire.

Technical Service Bulletin 26-01-056G provides instructions to inspect and retighten the crossover fuel pipe, as necessary. If a fuel leak is found, the crossover pipe will need to be replaced and tightened to specification.

B. Affected Vehicles:
