

[Recall 033G - High Pressure Fuel Crossover Pipe - Retailer Notification \(No Remedy\)_\(posted 04.10.26\).pdf](#)

Genesis Motor America (HMA) has launched Remedy Not Available for this recall. An update will be provided once a remedy is available.

A "stop sale" has been issued on affected new vehicles in dealer's inventory. As required by federal law, retailers must not deliver new vehicles for sale or for lease to customers until all open recalls have been performed. Retailers must perform all open recalls on used vehicles, demo, and rental vehicles prior to placing them into customer use and whenever an affected vehicle is in the shop for any maintenance or repair.

A. Recall Description:

The crossover fuel pipe connecting the left and right fuel rails of the engines in the subject vehicles may have been installed with retention fasteners that may gradually loosen over time. The retention fasteners were tightened with insufficient concentrations of torque stabilizer at the fuel rail connections during vehicle assembly, causing the retention (axial) force to diminish over time. A fuel pipe with loose connections could allow fuel to leak, increasing the risk of an engine compartment fire.

B. Affected Vehicles:

VIN Identification: Use the 'Vehicle Information' screen in WebDCS under the 'Campaign Not Performed' section to determine recall applicability.
