

New Safety Recall Advanced Communication – 52D

FCA US LLC (FCA US) has announced a safety recall on certain 2020 - 2022 model year (RU) Chrysler Pacifica Plug-In Hybrid Electric Vehicles (PHEV).

REASON FOR THIS SAFETY RECALL

Some of the above vehicles may have been built with a high voltage (HV) battery containing cells produced on an alternative assembly line. These battery packs may fail internally, resulting in thermal runaway leading to a vehicle fire. A vehicle fire can result in increased risk of occupant injury and injury to persons outside the vehicle, as well as property damage.

SERVICE ACTION

FCA US will conduct a voluntary safety recall on all affected vehicles to update the HV Battery Pack Control Module (BPCM) with revised software to monitor battery pack assembly operational status for conditions that could lead to a fire in the battery pack assembly. FCA US will inspect and, if necessary, replace the battery pack assembly.

FCA US will also be providing a Warranty Extension for the high voltage battery, specifically related to the defect. Details of the Warranty Extension terms will be sent in a separate communication.

Until the remedy is complete, FCA US is advising owners of these hybrid vehicles to refrain from recharging them, and to park them away from structures and other vehicles.

The remedy for this condition is not currently available. Dealers will be notified of the launch of this safety recall by way of established communication methods. This recall is estimated to launch in 2nd Quarter of 2026.

We ask that you please take the time to ensure that your personnel are aware of this communication and are prepared to execute a customer friendly process for inquiries regarding involved vehicles.
