STOP SALE NOTICE - IMPORTANT SAFETY RECALL
NHTSA 26V-490
TC 2026-370

August 21, 2026

To: All Grand Design RV Dealers

Grand Design RV has decided that a defect which relates to motor vehicle safety exists in certain Grand Design 2026 Imagine travel trailers in which the 120V receptacle cover in the front passthrough utility compartment was installed with the screws in the center holes, allowing a screw to contact the wiring behind it, built between 03/26/2026 and 03/30/2026. A recall to address this issue was initiated effective 7/31/26.

Description of the Defect The cover over the 120V receptacle in the front passthrough utility compartment of your travel trailer may have been secured using the two center screw holes rather than the four corner holes. A screw installed in a center hole can contact the 120V wiring behind the receptacle and damage the wire insulation, which could result in an electrical short, arcing, and a fire. The condition is behind a trim panel and is not visible during normal use.

Remedy Your authorized Grand Design RV dealer will inspect the screw positions on the receptacle cover and, if the screws are in the center holes, remove the trim panel, inspect the 120V wiring, repair the wiring if it has been damaged, and install a new cover secured through the corner holes, at no cost to you. The inspection takes about 10 minutes, plus about 30 minutes if the wiring must be repaired. The required repair instructions are attached to this letter and posted to the GDRV dealer portal.
