New Safety Recall Advanced Communication – 51D

FCA US LLC (FCA US) has announced a safety recall on certain 2026 model year (DT) Ram 1500 Pickup trucks.

REASON FOR THIS SAFETY RECALL

Some of the above vehicles may experience an incorrectly functioning tire pressure monitoring system (TPMS) sensor which may report a false tire pressure. Inaccurate indication of tire pressure may result in tire failure, which could increase the risk of a crash.

The condition described above does not comply with FMVSS No. 571.138 states that "...each vehicle must be equipped with a tire pressure monitor system" that detects "when one or more of a vehicles tires is significantly under-inflated and illuminates a low tire pressure warning telltale." The tire pressure system in the suspect vehicles may not accurately report tire pressure.

SERVICE ACTION

FCA US will conduct a voluntary safety recall to inspect, and if necessary, replace the TPMS sensors. The remedy for this condition is not currently available. Dealers will be notified of the launch of this safety recall by way of established communication methods. This recall is estimated to launch in 4th Quarter of 2026.

We ask that you please take the time to ensure that your personnel are aware of this communication and are prepared to execute a customer friendly process for inquiries regarding involved vehicles.
