Replacing Incorrect Labels on Freedom Aire Coaches

Locate the yellow label on the wall beside the front overhead bunk and slideout.

Peel the old label off and discard it.

Place one of the new yellow labels in the same spot.

Do not use solvent on the décor panel, as it may strip the color off.

Go to the edge of the entrance door to locate and remove the yellow label.

If any residue remains, remove it carefully using a solvent and razor blade (Newmar recommends R-M 900 Pre-Kleano).

Once the sticker is completely removed, discard it and clean the door frame with isopropyl alcohol.

Allow it to dry (it will flash off fast), then install a new yellow sticker in the same area.

If your packet of labels contains a 3rd label (white in color), go to the kitchen overhead cabinet and locate the existing sticker.

Peel it off and install the new sticker.

Do not use solvent on the inside of the cabinet, as it will damage the finish.
