

Recall Campaign F1029 – Network Communication

Subject: PDC Channel Availability and Ordering

Recall Campaign F1029 WST Positive Junction Post was released on May 21 ahead of our standard PDC stocking levels due to the time-sensitive nature of the campaign.

As a result, initial inventory levels for certain parts are limited, and intermittent backorders may occur as supplier production and distribution react to the initial order surge and market demands.

Current Parts Availability

The most limited parts for Campaign F1029 are the butt splices listed below. Suppliers are actively responding to this demand, and the current backlog is expected to be resolved within the next three weeks.

For all other F1029 parts, inventory is either currently available or in transit to the PDCs, with a steady flow of supply continuing into the network.

MATERIAL_NBR	DESCRIPTION	NOTE
PHM 8 2960	BATT TERM COPPER BUTT SPLICE-2/0 GA.	Qty = 20,000 PDC ETA is CW25-26.
PHM 8 2980	BATT TERM COPPER BUTT SPLICE-4/0 GA.	Qty = 15,000 PDC ETA is CW25-26.

Note: Please see campaign recall bulletin [F1029 Western Star Positive Junction Post](#) for full parts list.

To help ensure PDC inventory is utilized effectively across the network, dealers are reminded to follow responsible ordering practices.

When placing orders:

- Order on an **“as-needed”** basis only. **Large or excessive ordering will be subject to review and controlled release.**
- For truck-down situations, please use the Vehicle Down Indicator (VDI) process.
Note: *The VDI process is intended to support individual vehicle repairs only and should not be used to gain advantage in the fulfillment queue through over-ordering.*

This is a top priority for DTNA, and we will continue to expedite shipments and improve delivery timing to ensure part availability to support the F1029 repairs.

Thank you for your cooperation and continued support as we manage demand during this initial phase.

F1029 DTNA Network Update June 5 2026
