

SERVICE CAMPAIGN BULLETIN

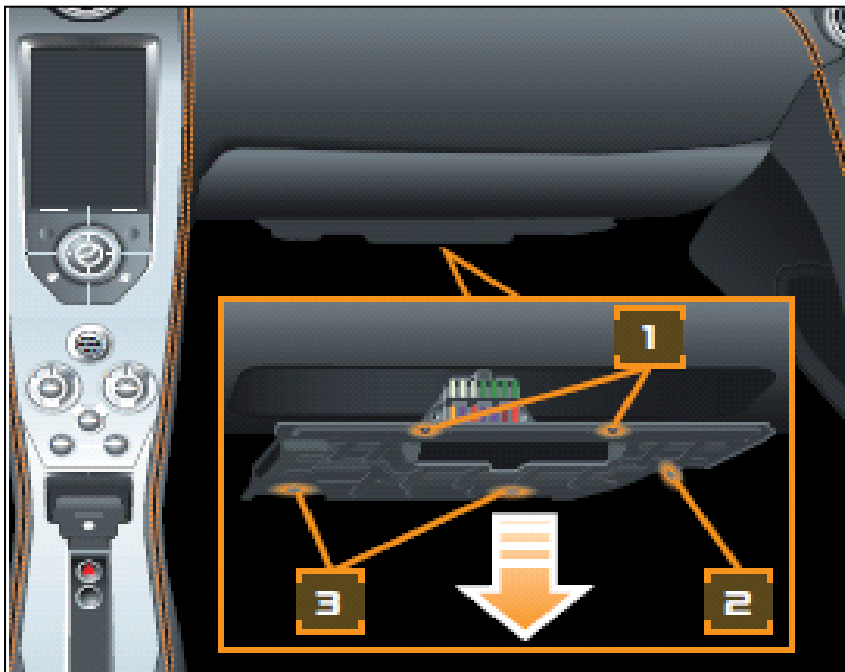

CAMPAIGN REF : 019
TITLE : Update secondary fuse box access cover label
DOCUMENT # : 11 P 001
AFFECTED VEHICLES : 12C Coupe

SITUATION : Quality Engineering at McLaren Automotive have produced an amended secondary fuse box label for affected vehicles. The existing secondary fuse box label states the driver and passenger door ECU fuses are 25A. However, vehicles fitted with an updated wiring loom, should state 20A fuses are needed. The updated label corrects this issue.

PROCEDURE : It is necessary to replace the secondary fuse box label on all affected vehicles.

REMOVAL:

1. Remove main fuse box access cover (1) by lowering the closing panel below the dashboard on the passenger side. Remove the side fixing clip (2) and the two clips at the rear (3).

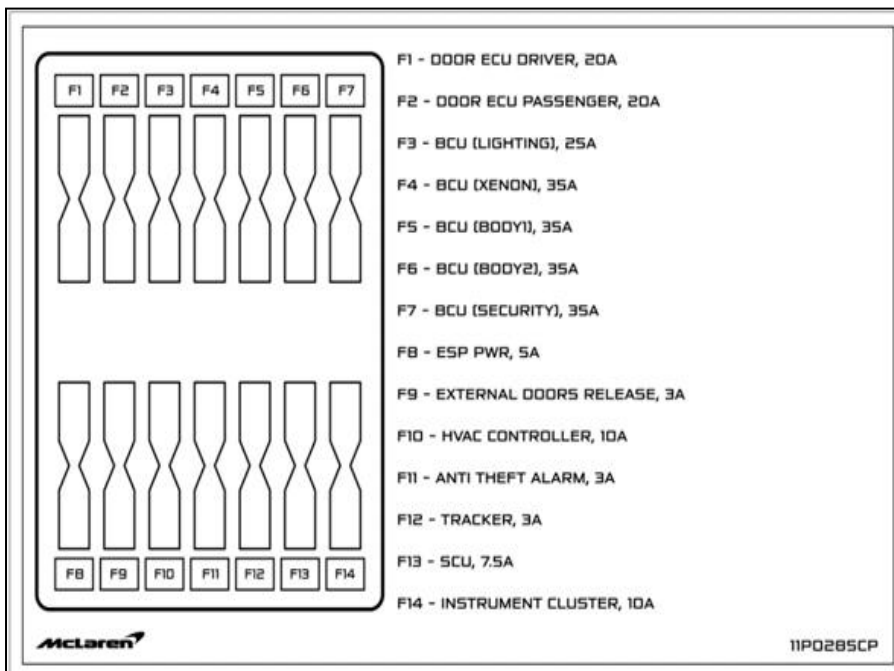

Care point: Some vehicles will have been supplied without a secondary fuse box label fitted. In this circumstance attach a new label onto the foam pad attached to the underside of the fuse panel.

2. Remove existing fuse label from the underside of the access cover.

INSTALLATION :

Care point: The labels are market specific. Therefore, ensure the correct replacement label is ordered and attached to the vehicle.

- Fit new fuse label to the foam pad attached to the underside of the main fuse box access cover. An image of the new label is outlined below.

- Install secondary fuse box access cover.

Please contact your Regional Aftersales Manager should you have any questions relating to the information contained in this bulletin.
