Re: ROADSTER RT 2013 Safety recall notice - Elevated Temperature in Engine Compartment - Final Remed [New]

Options ▾

Tuesday - last edited Tuesday

As mentioned above the 2013 RT Safety Recall is available, here are the 1st steps you need to take before the parts start to come in and you do your 1st units.

- Download the latest version of **B.U.D.S. R3.6.1** (this B.U.D.S. version is specifically released for this bulletin which includes an ECM update.
- Watch the Help Video - [ROADSTER 2013-10 Safety Warranty Bulletin Procedure Help Video_000112165](#)
- Get the recommended tools to perform the repair correctly

Do not do an ECM update on a 2013 RT **WITHOUT** having done the fuel system upgrade 1st, the parts and software together are needed, installing the parts or the software without the other will cause runnability issues, fault codes and possible engine damage.

Do not install the fuel system upgrade on a previous Model Year RT model (2010,11,12) as the ECM update is not available for these units. Installation of the fuel upgrade system on a previous MY RT model (2010,11,12) will cause runnability issues, fault codes and possible engine damage.
