

For non-California owners

Dear Nissan Altima Owner:

Nissan has discovered that your Altima may be equipped with an improperly calibrated Engine Control Module (ECM) that may incorrectly detect engine valve closure as engine knock. Due to this issue you may experience some minor drivability symptoms and a slight decrease in fuel economy under certain driving conditions.

What Nissan Will Do

To correct this condition, Nissan is conducting an Emission Recall Campaign to reprogram the Engine Control Module in your vehicle. For vehicles with greater than 50,000 miles, the manifold catalyst will also be replaced due to possible prolonged exposure to higher than anticipated exhaust gas temperatures. Any cracked manifold catalyst or front exhaust tube with catalyst will be replaced regardless of vehicle mileage. This free ECM reprogramming service should take about one hour to complete, but your Nissan dealer may require your vehicle for a longer period of time if catalysts need to be replaced or based upon their work schedule.

What You Should Do

Contact your Nissan dealer at your convenience in order to arrange an appointment to have your vehicle repaired. Please bring this notice with you when you keep your service appointment. Instructions have been sent to your Nissan dealer.

If the retailer fails, or is unable to complete the modifications free of charge, you may contact the National Consumer Affairs Department, Nissan North America, Inc., P.O. Box 685003, Franklin, TN 37068-5003. The toll free number is 1-800-NISSAN1 (1-800-647-7261).

Thank you for your cooperation. We are indeed sorry for any inconvenience this may cause you.
