

Exhaust Gas Recirculation (EGR) Valve D11F, D11H, D13F, D13H, D16F, D16H

FSB 293-012, Exhaust Gas Recirculation (EGR) Valve

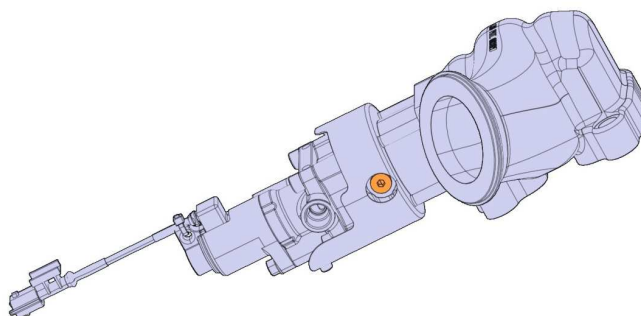

(October 2012)

Several improvements in design on the VOLVO D11F, D11H, D13F, D13H, D16F and D16H engines EGR valves allow that they no longer require the drain tube. For D11 and D13 engines, EGR valve replacement kit 85123198 has been replaced by kit 85133799. For D16 engines, 85123199 has been replaced by kit 85135813. When installing the new EGR valve to service a vehicle originally equipped with the drain tube, remove the p-clamp and tube. Discard the old drain tube.

CAUTION

The new EGR valve does not require a drain tube. Do not remove the plug in the new EGR valve and install the drain tube. Damage to components may result.

Service personnel: Please circulate, read and initial
