SALE 10K Chassis Sale ! SALE **Minotour**

TBB has a number of MY2011 Chevrolet 10K GVWR, 139"wb, 6.0L gas, white chassis for sale.

Bodies built on these chassis must use lap and shoulder seat belt seats, using either of the IMMI Xchange, M2K or the newly released Freedman Family 3PTA seat.

This now makes these chassis very versatile in that the 041 body can be configured with regular school lap and shoulder seat belt seats for child activity type buses or the Freedman coach seat with the lap and shoulder belts for either older students or adults.

The 041 bus body built on these chassis is the perfect size for 14 passengers and even allows room at the rear for a luggage storage area.

This varied offering of seats and availability of all our standard options should provide advantages to make them very desirable.

Added to this, TBB will discount the chassis \$2000.00 for a net price of \$20,712.00 each. GM is now offering a "Final Payout" amount of \$3,500.00 and it is your choice whether to accept this payout or apply for Bid assistance. Accepting the "Final pay" would reduce the cost of the chassis to \$17,212.00. The price of this chassis as a MY2013 is \$23,609.00.

Yes, today's 10,050lb GVWR chassis can have non restraining type seats installed, with the exception of California, BUT compared to a bus built on today's chassis with restraining seats, for a savings of approx. \$3900.00 you can have the added feature of lap & shoulder seat belt activity seats or for an approximate savings of \$3,100.00 and have stylish coach type seats with lap and shoulder belts.

Early delivery is available as chassis are on ground- check with your regional sales manager for more details.
