Propane Powered Minotour ***USA Only***

This bulletin is releasing the new propane autogas powered Minotour.

This new offering enables TBB to be more than competitive with Collins and Blue Bird in the Type A market where alternative fuel, clean emission vehicles are required.

Although the chassis has a premium cost over both gas and diesel and there is an up charge for the body, there are often Federal, State and Local grants available to offset this additional cost.

TBB has on order MY2013 propane chassis that we expect to be on ground 4th quarter this year, so let your customers know we are ready to serve their needs in the Type A market where alternative fuels are required or requested.

Details include:

Chassis Availability: GM4500 – 159"wb, 14,200lb GVWR cutaway.

Chassis Warranty: GM standard 3yr/36,000 mile bumper to bumper with on the power train.

Engine: 6.0L propane autogas liquid fuel injected engine providing 332 HP and 370lb.-ft. torque.

Engine Warranty: Factory warranted and serviced by all GM dealerships nation-wide with a 5 year/100,000 mile warranty.

Range: Fuel system capacity giving 300+ miles range.

TBB Options: 051 body only in both regular and flat floor configurations, available with most body options, with a seating capacity of up to 30 passengers with A/C.

Below is a summary of changes that will take effect in ASIST.
