TBB/SYNTEC Seats with ISO Latch

In an effort to make the ordering of ISO latch options for seats a simpler process, we have combined a seat size and ISO latch into just one option number.

Where required, you will now order the seat width, which is combined with the ISO latch. The combined option will inform you how many ISO latches there are on the seat – so no more having to guess the quantity. If you require multiple rows of seats with ISO latch, just order the quantity of seats you need and remember seats will be installed from front to back.

Canadians will still have to order the Canadian tether separately, and the number will have to match the total number of ISO latches.

Benefits include reduction in the number of options to choose, visibility of the number of ISO latches on each particular seat size, and the seat and ISO latch is combined into just one option.

For floor and track mount of seats, you will still have to order the applicable mounting hardware option.

The new options are listed below and are available now. The existing latch options to be deleted are listed also, but will not be discontinued until August-07. So, if you have orders currently in the system that are not committed, you will need to complete them prior to August-07 or you will be forced to reconfigure your order.

Below is a summary of changes that will take effect in ASIST.
