SUBJECT

Rear Window False Anti-trap Activation

MODEL

NEW E90

NEW E91

INFORMATION

The anti-trap protection feature may be activated when no obstruction is present. This may occur at either one or both of the rear windows.

The root cause of the false anti-trap activation may be difficult to determine. The attached diagnosis flowchart has been developed to assist with determining the actual root cause of the failure as well as to help prevent unnecessary part replacements.

The root cause is typically either an issue with the window system, or an electrical/software issue. The diagnosis flowchart will help ensure that repairs are only carried out for the system that is most likely at fault.

NEW Refer to B511508_Attachment.

PARTS INFORMATION

Refer to the Electronic Parts Catalog (EPC) for the appropriate parts noted in the diagnostic flowchart.

WARRANTY INFORMATION

NEW Not applicable.
