2012-2013 Passat and Golf / GTI – Window Convenience Opening / Closing Function

November 16, 2012: Update to applicability.

The convenience opening and closing function of the windows on Passat and Golf /GTI differs from other models. The left front window switch on the driver's door is used to raise and lower all windows with the ignition switched OFF.

To raise all windows, lift up and hold the driver's window switch until the windows are in the full up position. Perform the opposite to lower all windows.

On vehicles with an MFI, this window operation function can be selected to operate only the driver's window, or all windows. Check this selection for customer complaints of only the driver's window operating.
