New! **#16075 Charging Center Kit**

11-20-12

Triton Trailers is pleased to announce a new accessory, **#16075 Charging Center Kit**, which is available for installation only for basic converter or premium converter kits when ordered for Triton fully enclosed trailers. This unit (as shown right) will be mounted to the side of the converter kit housing inside the trailer. This is only a factory installed option and only available in white.

The Charging Center unit has 2 ports, one for USB connections and another for 12V plug in (commonly called a "cigarette lighter" plug in). The USB port is a universal 12V port for charging electronic devices for everything from laptops to tablets, and cell phones with appropriate connection cords. This is a nice and convenient way to charge your electronics while you are working in your enclosed trailer. Don't miss a call or loose power in your batteries because you couldn't charge your electronics in the trailer.

If you have any questions with this option, please feel free to give us a call at Triton. Thank you.

Sincerely,

Triton Sales and Marketing Staff
