

12-20-12

Dear Distributors, #16.137

Shown left, is a new option that we are offering for the Triton Enclosed Trailer models from Cargo to Lowboys. The "Auto-On Door Switch" is a handy device that can be installed in the frame of a man door and allows the user to automatically turn on lights in the trailer by simply opening the side access or man door. Much like your refrigerator door, this switch will shut off the lights once the door is closed again.

This switch can turn on and off the lighted grab handle, dome lights, cove lights and others. This option is available only for Triton enclosed trailers with a man door installed at the factory.

A separate wall switch can be wired in addition to the Auto-On Door Switch; for example the dome lights can be activated by a wall switch too.

We will offer this switch at the same distributor cost of the standard wall switch of \$18.00. Place your next Triton enclosed order with one of these convenient switches. Give us a call if you have any questions.

Sincerely,

Doreen Margelowsky
