Freedman Seating Product Updates

FW & 3PT legs

Very soon you will start seeing some slight changes in our FW and 3PT legs.

- You will see the addition of bend reliefs in the 4 corners
 - Allows for smoother forming which reduces small tears and material bulges and increases the tolerance
 - Improves the robotic welding accuracy
- Legs will now have 1 hole and 3 slots in the top surface (used to be 2 holes)
 - This makes the leg more universal across our seating products
 - Adds a little adjustability for installation

Both changes have been thoroughly tested. We believe there is no reason for you to perform any additional testing or validation of these changes. Attached is a drawing illustrating these changes.

CitiSeat Inserts

We recently changed the adhesive used to attach fabric and vinyl to our CitiSeat inserts. Because of this new and improved glue we are able to eliminate the pull downs on CitiSeats. This will be a rolling change going forward on all new orders.

Please feel free to contact your Freedman Seating representative if you have any questions.

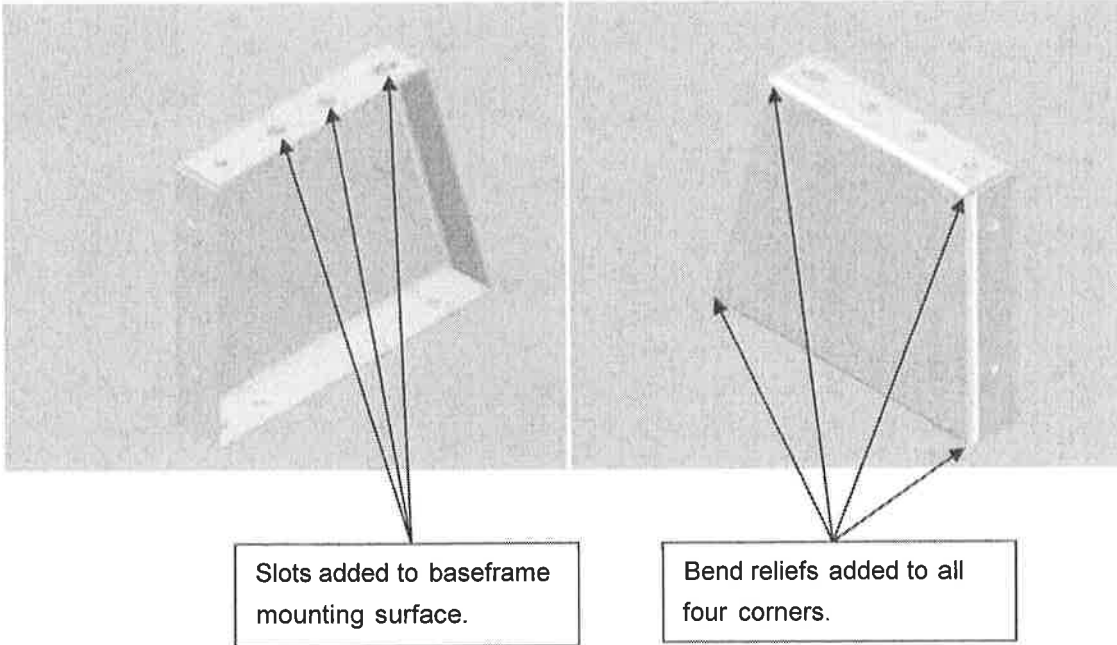

Sincerely,

&t---

Dan Cohen
