Triton Kayak Trailer Series Continues to Grow!!

12-7-12

Triton is excited to announce the latest addition to the kayak family, the LXT-LK2. This kayak trailer will round out the complete line. Triton offers a trailer for hauling 2, 4, or 6 recreational or touring kayaks. This allows for a trip of excitement for a couple, a family, or a group of friends who want to kayak.

The Kayak Series will work great for anyone who wants to eliminate strapping their kayaks to the top of their vehicle. The last thing a consumer needs to worry about is if the kayaks are strapped tightly enough and hoping they do not fall off before reaching their destination. This is why each aluminum rack on the trailer has welded tiedown tabs on each end to strap and secure the kayaks down safely.

The line of the kayak trailers are the perfect length and width to allow for better visibility of the kayaks while on the road. The trailers are easy to maneuver whether driving and it is hitched to your vehicle or you need to move to another vehicle or for storage.

The boat racks are designed for easy installation and are bolted to the trailer frame. You won't have to worry about your kayaks being scuffed up either during travel because Triton has cushioned foam gaskets on the crossmembers on the boat racks.

Remember, Triton's Kayak Series standard features include a galvanized axle beam, bearing lube hubs, molded wire harness (no splices) and sealed waterproof lights. Choose from a swivel wheel tongue jack, spare tire, or spare tire carrier to accessorize your trailer.

This Kayak Series allows for a worry-free trip and easy towing and lets the consumer only think about where the water may take their kayak. So whether you are traveling across country for a trip or just going down to the lake, the Triton kayak trailers are the right trailer to get you to your destination.

Triton is excited to be part of your kayaking experience.
