VOLUNTARY SERVICE CAMPAIGN
REAR SUSPENSION MEMBER REPLACEMENT / BUSHING REPLACEMENT AND SEALING

This bulletin has been amended. The use of Genuine Nissan Parts Degreaser in this bulletin has been changed to an Automotive Aerosol Degreaser (local source). Please discard previous versions of this bulletin.

CAMPAIGN I.D. #: P5216
APPLIED VEHICLES: 2002-05 Altima (L31)
2004-05 Maxima (A34)

APPLIED VINS: 2002 Altima: 1N4*L11**2C100000 - 719021
2003 Altima: 1N4*L11**3C100000 - 355207
2004 Altima: 1N4*L11**4C100000 - 199931
2005 Altima: 1N4*L11**5C100000 - 322026
1N4*L11**5N400000 – 472765
2004 Maxima: 1N4*A41**4C800000 - 931667
2005 Maxima: 1N4*A41**5C800000 - 845620

INTRODUCTION
On some model year 2002-2005 Nissan Altima and 2004-2005 Nissan Maxima vehicles, there is a possibility that corrosion of the rear sub-frame may occur. Corrosion is most likely in cold climates where heavy salting of roads is common practice in freezing conditions. A mixture of road salt and water can promote corrosion in the rear sub-frame bushings of some vehicles. In severe cases, cracking of the rear sub-frame may occur, which may result in a knocking noise coming from the rear of the vehicle. The performance or handling characteristics of the vehicle are not affected and it is safe to drive the vehicle.

For vehicles believed by Nissan to be registered in one of the “salt” states (listed on the next page) where this condition is more likely to occur, Nissan is conducting a Service Campaign. On most vehicles, Nissan will replace the rear sub-frame assembly. On some 2005 Model Year vehicles, where sub-frame replacement is not necessary, Nissan will replace and seal the front bushings and seal the rear bushings.

Due to the number of vehicles affected by this action, the Service Campaign is being implemented in phases by model year. The implementation will begin with model year 2002 vehicles which have a higher likelihood of corrosion, and also with model year 2005 vehicles, which may require the less extensive repair.
It is important that you check Service Comm (P5216) prior to starting any repairs to
determine if the vehicle is eligible for this repair. Because this campaign is being
implemented in phases, some model years will not initially display in Service Comm as an
“open” campaign but will be added at a later date.

SALT STATES

| Connecticut | Kentucky | New Hampshire | Tennessee |
| Delaware    | Maine    | New Jersey    | Vermont   |
| District of Columbia | Maryland | New York     | Virginia |
| Illinois    | Massachusetts | Ohio  | West Virginia |
| Indiana     | Michigan | Pennsylvania | Wisconsin |
| Iowa        | Minnesota | Rhode Island |           |

WARRANTY EXTENSION

To ensure the highest levels of customer satisfaction, Nissan is also extending the warranty
for cracking of the rear sub-frame due to corrosion to a total of 13 years with unlimited
mileage on all model year 2002-2005 Nissan Altima and 2004-2005 Nissan Maxima
vehicles. Vehicles included in the Service Campaign (as described above) are also covered
by the Warranty Extension.

Please refer to Warranty Bulletin WB/05-038 for appropriate claims coding when a repair is
performed under the extended warranty.

IDENTIFICATION NUMBER

Nissan has assigned identification number P5216 to this campaign. This number must
appear on all communications and documentation of any nature dealing with this campaign.

NUMBER OF VEHICLES POTENTIALLY AFFECTED

The number of vehicles potentially affected is approximately 411,000.

DEALER RESPONSIBILITY

It is the Nissan dealer’s responsibility to check Service Comm for the campaign status on
each vehicle falling within the range of this Voluntary Service Campaign (P5216) that
enters the service department. This includes vehicles purchased from private parties or
presented by transient (tourist) owners and vehicles in a Nissan dealer’s inventory.
Apply Genuine Nissan Rust Penetrant P/N 999MP-A3020P (or equiv.) to all fasteners that will need to be removed to perform the procedures in this bulletin. See illustration on page 6 for the location of these fasteners.

Remove Rear Suspension Member
Perform Procedure A

Is the vehicle a 2005 model year?

No
Replace Rear Suspension Member
Perform Procedure B and D
Perform Rear Wheel Alignment
End

Yes
Replace Front Bushings in Rear Suspension Member
Perform Procedure C

Front Bushings Can Be Removed
Replace/Seal Front Bushings in Rear Suspension Member
And
Seal Rear Bushings in Rear Suspension Member
Perform Procedure C
Re-Install Rear Suspension Member
Perform Procedure D
Perform Rear Wheel Alignment
End

Front Bushing(s) Can Not Be Removed
CAUTION: Avoid tool damage: Do Not Exceed 203 Nm, (20.7 kg-m, 150 ft-lbs) when removing the bushings.

Replace Rear Suspension Member
Perform Procedure B
Re-Install Rear Suspension Member
Perform Procedure D
Perform Rear Wheel Alignment
End

End
Important Service Tips

To ensure a quality repair, use the following service tips when performing the procedures in this bulletin.

- When removing the four nuts that secure the rear suspension member to the body, use caution to avoid breaking the studs. Clean the exposed threads with a wire brush and use plenty of Genuine Nissan Rust Penetrant P/N 999MP-A3020P (or equivalent). If necessary, slowly work the nut counter-clockwise and clockwise as the nut progresses down the threads of the stud (like working with a tap or die). Do NOT use an air tool to remove the nuts.

![Image of suspension member nut removal]

- CAUTION: When removing the rear suspension member mounting nuts DO NOT use any breaker bar or ratchet handle extensions, such as a long pipe, to loosen the nuts.

- Do NOT remove the shock absorbers from the two studs at the top of the wheel well because the studs may break. Instead, remove the single bolt at the bottom of the shock absorber.
• When replacing the front bushings in the 2005 sub-frame, start by removing the front right (passenger side) bushing first. It is likely that the right bushing will be more difficult to remove than the left.

• Included in the rear suspension member kit is a bag that contains an exhaust gasket and eight nuts. Make sure to find and retrieve this bag from the kit box.

• Use a “back up” wrench at all times when removing or tightening fasteners that use a nut and a bolt. This is especially important when tightening the alignment eccentrics.

• Make sure all fasteners are tightened to the correct torque specification.

• CAUTION: When tightening the rear suspension member mounting nuts, DO NOT EXCEED 100 N-m (10.3 Kg-m, 74 ft-lb).
Preliminary Service Step: Before performing any procedures in this bulletin, apply Genuine Nissan Rust Penetrant P/N 999MP-A3020P (or equiv.) to all fasteners that will need to be removed to perform the procedures in this bulletin. Refer to the illustration (below) for the location of these fasteners.
PROCEDURE A: Remove Rear Suspension Member/Suspension Components

CAUTION: Use suitable covers to protect upholstery, carpet, trim, paint, etc. when performing this procedure.

Use this procedure to remove the original rear suspension member.

1. From inside the vehicle, release the parking brake cable tension as follows:
   a. Remove the console finisher by carefully prying UP with a plastic pry tool to release the securing clips.

   ![Figure A1](TP050791)

   Figure A1

   b. Remove the center console finisher by carefully lifting UP to release the securing clips (see Figure A2).

   - Disconnect all harness connectors from the finisher.

   ![Figure A2](TP050792)

   Figure A2
c. Turn the cable tension adjustment nut counter-clockwise (left) to release the parking brake cable tension (see Figure A3a). Then disconnect the parking brake cables from the equalizer bar (see Figure A3b).

![Figure A3a](image1)

![Figure A3b](image2)

2. Raise vehicle on lift and remove both rear wheels/tires.

3. Confirm Genuine Nissan Rust Penetrant (P/N 999MP-A3020P) or equivalent, was applied to all fasteners that hold the:
   - Rear suspension member
   - Exhaust system (from catalytic converter back)

   If rust penetrant was not applied previously, apply before continuing.

4. Remove the exhaust system as follows:
   a. Remove two nuts that hold the center exhaust pipe/muffler to the catalytic converter (see Figure A4).

![Figure A4](image3)

Procedure A
NOTE: If rust penetrant was not applied previously, make sure you apply Genuine Nissan Rust Penetrant P/N 999MP-A3020P (or equiv.), before removing the nuts in the following steps.

**Vehicles With QR25DE Engine (“single exhaust”):**

b. Remove three nuts and disconnect the rear muffler from the mounting bracket (see Figure A5).
   - Note the location of the ground strap on the muffler. It needs to go back in the same place.

**Vehicles With VQ35DE Engine (“dual exhaust”):**
c. Remove six nuts and disconnect the rear mufflers from the mounting brackets (see Figure A6).
   - Note the location of the ground strap on the passenger side (RH) muffler. It needs to go back in the same place.
d. Remove two nuts and take off the exhaust pipe hanger from the rear suspension member (see Figure A7).

![Figure A7](image1)

e. Remove four nuts and take off the center cross brace (see Figure A8).

![Figure A8](image2)

f. Carefully lower the exhaust system from the vehicle and place it in a safe location.

Procedure A
5. Remove the rear brake calipers and rotors as follows:
   a. Remove the two bolts that hold the rear caliper bracket (torque member).
   b. Move the caliper and bracket assembly out of the way of the rotor. Then use a piece of “support” wire to hang it from the brake hose bracket.

   ![Support Wire](Support_Wire.png)

   ![Brake Caliper](Brake_Caliper.png)

   ![Hang Brake Caliper With Support Wire](Figure_A9.png)

   c. Remove the rear brake rotor, making sure you:
      - Mark the rotor with “R” or “L”.
      - Index the rotor to a stud.
   d. Use this procedure to also remove the driver’s side (LH) rear rotor.

   **IMPORTANT:** The rotors must be re-installed in exactly the same location/position.
6. Disconnect the parking brake cables from the rear knuckles as follows:
   
a. Apply Genuine Nissan Rust Penetrant P/N 999MP-A3020P (or equiv.) to the parking brake cable pin and retainer, making sure you don’t get the penetrant on the parking brake shoes.

b. Pull the parking brake cable pin retainer OUT towards the hub/wheel studs (see Figure A11).

c. Then, use a magnet or other suitable tool to remove the pin from the bottom side of the parking brake cable end (see Figure A11). Be careful not to drop/lose the pin.

   ![Figure A11](image1)

   
   d. Finally, remove the bolt and remove the parking brake cable from the back side of the knuckle (see Figure A12).

   e. Do the same procedure to remove the cable from the driver’s (LH) side knuckle.

   ![Figure A12](image2)

Procedure A
7. Remove the parking brake cables from the rear suspension member (see Figure A13). Let the cables hang down freely.

8. Support the lower rear control arm and remove the shock absorber lower mounting Bolt (see Figure A14). Do this procedure on both sides.

**NOTE:** Do not remove the shock absorbers from the two studs at the top of the wheel well as the studs may break. Instead, remove the single bolt at the bottom of the shock absorber.
9. Remove the two front bolts from the right and left “stay” brackets (see Figure A15).

**For all 2002 Altimas and 2003 Altimas built up to 1/24/03:**

- Do NOT re-use the original stay brackets, install new ones. See the Parts Information section.
- Mark the original stay brackets as “NG” and discard them.

**NOTE:** The original stay brackets have a rubber washer attached to them. These rubber washers are not used on the new stay brackets.

10. Disconnect the two ABS harness connectors from the back side of the rear suspension member (if equipped). See Figure A16.

- Remove the ABS body-side harness tie wrap from the rear suspension member.
11. Support the rear suspension member with the special tool transmission jack adapter J-47326 and transmission jack (see Detail View A). Then, place a support jack under the front frame member (see Detail View B). The support jack will help balance the vehicle on the lift once the rear suspension member is removed.
12. Remove the four main suspension member mounting nuts and the LH/RH stay brackets (see Figure A18 below).

- For all 2002 Altimas and 2003 Altimas built up to 1/24/03: Do NOT re-use the original stay brackets. Install new ones. See the Parts Information section.

**CAUTION:** Do not damage the studs/threads when removing the four main suspension member mounting nuts. Take note of the following when removing these nuts.

**To avoid breaking stud(s) / damaging threads:**
- Before removing, **clean the exposed threads** with a wire brush or other suitable tool and apply Genuine Nissan Rust Penetrant P/N 999MP-A3020P (or equivalent).
- Use **plenty of penetrant** and **slowly** work the nut counter-clockwise and clockwise as the nut progresses down the threads of the stud (like working with a tap or die).
- **CAUTION:** When removing the rear suspension member mounting nuts DO NOT use any breaker bar or ratchet handle extensions, such as a long pipe, to loosen the nuts.
- If the suspension member mounting nuts cannot be loosened do steps A through D below.

For this procedure, you'll need 1) A die grinder with a small diameter, **burr-type** cutting attachment 2) A small cold chisel 3) A ball peen hammer.

**NOTE:** Perform the following operation only on the mounting nuts that are stuck.

A. Use the grinder to make a slit or groove on both sides of the nut, top to bottom. **CAUTION:** Do not damage the mounting stud threads. You don’t need to cut all the way through the nut.
B. Now use the cold chisel and hammer to split both sides of the nut. Again, be careful not to damage the threads.

NOTE: Replacement nut part number is 55269-2Y000. A maximum of four can be billed as part of this campaign.

IMPORTANT: If the stud breaks, refer to NTB06-018 for further directions.

13. Carefully lower the rear suspension member out of the vehicle.
   - If needed, carefully use a pry bar to “work” the suspension member loose from the four main suspension member mounting studs.
   - If this does not work, do steps A through D below:

   For this procedure, you'll need: 1) One large crossbar-jaw-type puller 2) An air chisel (zip gun). 3) An impact wrench. You'll be using these tools to pry the suspension member away from the body frame rails.

   A. Attach the puller securely to a suspension member upper mount (see Figure A21).
   B. Use an impact wrench on the puller and apply downward tension to the mount.
   C. Now use the air chisel above the mount to pry the member slightly away from the body frame rails. (about ¼ inch, or 6 mm). (See Figure A22)

   CAUTION: Make sure the chisel tip is placed directly at the point of contact between the suspension member and the body frame rail.
   D. Then move the puller to the other suspension member mounts in turn. Continue alternating steps B and C above on the other three mounts until the suspension member is fully separated from the body frame rails.

14. If the vehicle you’re working on is a:

   **2002 through 2004 MY**, continue with Procedure B
   **2005 MY**, skip to Procedure C

---

Procedure A

---

Crossbar-jaw-type puller (Snap-On P/N CJ2002 or equivalent.)
Air chisel placement
PROCEDURE B: Replace Rear Suspension Member

1. Remove the rear suspension member from the transmission jack and place it on a sturdy work surface.
   - Use two people to perform the above step.

   ![Figure B1](TP051074)

2. Remove the ABS wire harnesses (if equipped) from the rear suspension member as follows:
   a. Remove the harness securing clips and connectors/mounting clips from the suspension member (see Figure B2).
   b. Remove the bolt that secures the harness support bracket (see Figure B2).
   c. Remove the ABS wire harness from the suspension member (do this for both the right and left side).

   ![Figure B2](TP050741)
3. Remove the suspension component assemblies listed below from the rear suspension member. Refer to Figure B3.

**NOTE:**
- If rust penetrant was not applied previously, apply Genuine Nissan Rust Penetrant P/N 999MP-A3020P (or equivalent) to all fasteners.
- For steps b, c, and e: discard the nuts as they are not re-useable. New nuts are provided in the kit.

a. Disconnect the “forward end” of the radius rods.

b. Disconnect the “inner end” of the front lower links. *

c. Disconnect the “inner end” of the rear lower links. *

d. Disconnect the stabilizer bar strut rod brackets from the upper suspension arms (keep these bolts, you’ll re-use them).

e. Disconnect the inner end of the upper suspension arms. *

* Discard nuts only. Bolts are to be re-used.

![Figure B3](TP050740b)
f. Pull the suspension component assemblies away from the suspension member as shown in Figure B4. Then remove the radius rod mounting pin as shown in Figure B4.

4. Turn the suspension member over and remove the stabilizer bar from the suspension member (see Figure B5).

5. Now, set the original suspension member aside.

Procedure B
6. Re-install the original assemblies onto the new suspension member.

a. Place the new suspension member upside down on the sturdy work surface.

b. Install the original radius rod mounting pins to the new suspension member and tighten the nuts to: 120 - 140 Nm (12.2 – 14.3 kg-m, 88.5 – 103.3 ft-lb). See Figure B6.

![Figure B6](TP050742b)

![Tighten Nut to: 120 - 140 Nm (12.2 - 14.3 kg-m, 88.5 - 103.3 ft-lb) TP050742b]

Figure B6

c. Re-install the original suspension component assemblies onto the new suspension member in the reverse order of removal. Make note of the following:

**NOTE:** Do NOT torque any of the nuts/bolts yet. You’ll do this later using a special A-arm adjustment tool #J-47438.

- The upper control arm bolts are installed from inboard to outboard as shown in Figure B7.

![Figure B7](TP050980)

Figure B7

**Procedure B**
• There are two eccentric Bolts for the inner end of the front lower links and the inner end of the rear lower links. They are installed as shown in Figure B8. Use new nuts from the kit when installing these bolts. **During installation, use a backup wrench to keep the eccentric bolts correctly positioned.**

![Figure B8](image)

• Make sure the ABS wire harness is correctly routed, secured, and connected (if equipped).

**NOTE:** If the harness cable ties or connector mounts are broken during removal, replacements are available:

ABS harness cable ties (Cable Clip): P/N 24225-79903, qty 6

ABS harness connector mount (vehicles built before 8/04): P/N 24346-10V02, qty 2

ABS harness connector mount (vehicles built after 8/04): P/N 24225-ZB00A, qty 2
NOTE: The following step is being performed on the driver’s (LH) side of the rear suspension member. You will need to perform this procedure on the passenger (RH) side of the rear suspension member also.

7. Temporarily install the special A-arm adjustment tool and tighten the suspension component nuts/bolts as follows:

   **NOTE:** The purpose of this tool is to make sure the suspension is in the “loaded” position while tightening the suspension components nuts/bolts.

   a. Install the special A-arm adjustment tool #J-47438-L over the stabilizer bar mounting studs as shown in Figure B9a. Do not install the nuts onto the studs yet.

   b. Lift UP on the suspension component assembly and place the “foot” of the A-arm adjustment tool under the upper control arm as shown in Figure B9b.

   c. Use the stabilizer bar mounting nuts as shown in Figure B9b to hold the tool in place.

![Figure B9a](image1.png)  ![Figure B9b](image2.png)

**Procedure B**
d. Tighten the suspension components nuts/bolts to the highlighted (shaded) torque specifications at this time (see Figure B10). You’ll tighten the remaining bolts/nuts later.

- Use a backup wrench when tightening fasteners that use a nut and a bolt.

8. Be sure to remove the A-arm adjustment tool after the nuts/bolts are torqued.

9. Perform the above procedure on the passenger (RH) side of the rear suspension member.

10. Install the rear suspension member assembly by performing Procedure D.

Figure B10

Procedure B
PROCEDURE C: Replace / Seal Front Bushings in Rear Suspension Member and Seal ONLY Rear Bushings in Suspension Member

To perform this procedure, you will need:

- Automotive Aerosol Degreaser (local source)
- 1217H Genuine Nissan Liquid Gasket (P/N 11121-C9910)
- Bushing Removal / Install Tool #J-47325

Figure C2

Procedure C
1. Inspect the rear suspension member at the locations shown in Figure C3 for corrosion damage.
   a. If there is no corrosion damage, continue with step 2 of this procedure.
   b. If there is corrosion damage, go to Procedure B: Replace Rear Suspension Member.

2. Secure the rear suspension member to the transmission jack with a suitable device, such as a tie-down strap. (See Figure C4).
3. Roll the transmission jack over to a work bench. Place one end of the suspension member on the bench top. This will help stabilize the assembly when performing the following steps.

Replace / Seal Front Bushings

1. Replace both front bushings in the rear suspension member as follows:
   a. Install the bushing remover/installer Tool #J-47325 to the right front (passenger side) bushing in the rear suspension member as shown in Figure C6.
      • When replacing the front bushings in the 2005 suspension member, start by removing the right front bushing first, then the left front. It is more likely the right bushing will be more difficult to remove than the left.
      • Keep the Screw (#530368) threads well lubed with the extreme pressure lubricant (#280934) from the kit.
2. Using a torque wrench with the bushing remover/installer tool, remove both front bushings (see Figure C7).

   a. If you cannot remove both bushings, replace the rear suspension member. Perform Procedure B.

   **CAUTION:** Avoid tool damage: Do not exceed 203 Nm (20.7 kg-m, **150 ft-lbs**) when removing the bushings.

   b. If you can remove both bushings, do not replace the rear suspension member. Complete this procedure, and then install the suspension member assembly by performing Procedure D.

---

![Figure C7](TP050814a)

**Figure C7**

**Procedure C**
3. Once the bushings are removed, clean and “prep” the front bushing bores in the suspension member as follows:

**NOTE:** Make sure you clean around the top edge of the bore too.

**Clean**
- a. Use a wire brush to remove all dirt, debris, etc. Then blow off with clean shop air.
- b. Spray Genuine Nissan Brake Cleaner P/N 999MP-AH001P (or equivalent) into the bore, and then wipe the bore with a clean, dry, lint-free rag.

**“Prep”**
- c. Spray Automotive Aerosol Degreaser into the bore.
- d. Blow off with clean, dry shop air.

![Clean Around Top Edge of Bore](figure_c8)

4. Install new bushings as follows:

- a. Clean the new bushing with automotive aerosol degreaser.
- b. Position the new bushing in the bore.
- c. To ensure a good seal, apply a 7mm (9/32") bead of 1217H Genuine Nissan Liquid Gasket (P/N 11121-C9910) around the bushing as shown in Figure C9.
  - Overlap the beginning and ending point of the liquid gasket by 9.5mm (3/8 of an inch). Make sure there are no gaps in the bead of liquid gasket.
  - It is okay if the liquid gasket squeezes out around the bushing as the bushing is being pressed into place.

![7mm (9/32") Bead of 1217H Liquid Gasket](figure_c9)
d. Install the bushing remover/installer Tool #J-47325 as shown in Figure C10.

**NOTE:** Keep the Screw (#530368) threads well lubed with the extreme pressure lubricant (#280934) contained in the kit.
e. Carefully tighten the nut and press the new bushing in until it’s fully seated (see Figure C11).
   - Use a torque wrench and turn clockwise until the bushing is fully seated. Torque to 135.6 Nm (13.8 kg-m, 100 ft-lbs).
   - Do NOT use an impact wrench.

f. Repeat these steps for the other front bushing.

Rear Bushings - Seal ONLY

1. Clean and “prep” around the top edge of the rear bushings as follows:

   **Clean**
   a. Use a wire brush to remove all dirt, debris, etc. Then blow off with clean shop air.
   b. Spray Genuine Nissan Brake Cleaner P/N 999MP-AH001P (or equivalent) onto the bushing and wipe with a clean, dry, lint-free rag.

   **“Prep”**
   c. Spray automotive aerosol degreaser around the top edge of the bushing.
   d. Blow off with clean, dry shop air.

Procedure C
2. Apply a 7mm (9/32") bead of 1217H Genuine Nissan Liquid Gasket (P/N 11121-C9910) around the Bushing as shown in Figure C13a.

- Overlap the beginning and ending point of the liquid gasket by 9.5mm (3/8 of an inch). Make sure there are no gaps in the bead of liquid gasket.

3. Use your finger or a suitable spreader to press/smooth the liquid gasket down into the crevice (small gap) between the bushing and suspension member (see Figure C13b), making sure not to remove any material.

4. Repeat these steps for the other rear bushing.

5. Re-install the rear suspension member. Refer to Procedure D.
PROCEDURE D: Install Rear Suspension Member Assembly

1. Place the rear suspension member assembly on the transmission jack.
   
   **NOTE:** You can insert a screwdriver through the front suspension member hole to help align the transmission jack adapter with the suspension member.

2. Clean and “prep” the four suspension member mounting studs (welded to the vehicle body) as follows (see Figure D1).

   **Clean**
   a. Use a wire brush to remove all dirt, debris, etc. Then blow off with clean shop air.
   b. Spray Genuine Nissan Brake Cleaner P/N 999MP-AH001P (or equivalent) onto the stud, and then wipe off with a clean, dry, lint-free rag.

   **“Prep”**
   c. Spray automotive aerosol degreaser onto the stud.
   d. Blow off with clean, dry shop air.

   **NOTE:** The stud threads must be clean and dry.
3. Clean and “prep” the four nuts that screw onto the suspension member mounting studs as follows (see Figure D2).

**Clean**

a. Use a wire brush to remove all dirt, debris, etc from the nut threads. Then blow off with clean shop air.

b. Spray Genuine Nissan Brake Cleaner P/N 999MP-AH001P (or equivalent) on the nut threads, and then wipe off with a clean, dry, lint-free rag.

**“Prep”**

c. Spray automotive aerosol degreaser on the nut threads.

d. Blow off with clean, dry shop air.

![Clean and “Prep” Nut Threads](TP051083)

**NOTE:** The nut threads must be clean and dry.

**CAUTION:** When tightening the rear suspension member mounting nuts in the next step, DO NOT EXCEED 100 N-m (10.3 Kg-m, 74 ft-lb).
4. Install the suspension member/suspension member components in the reverse order of
removal, making sure of the following:

- For all 2002 Altimas and 2003 Altimas built up to 1/24/03 ONLY: Install new LH and RH
  stay brackets. See Parts Information. The original rubber washers are not used on
  the new stay brackets.

- Re-torque all fasteners to specification (see Figure D3).

  
  CAUTION: When tightening the rear suspension member mounting nuts, DO NOT
  EXCEED 100 N-m (10.3 Kg-m, 74 ft-lb).

- Use a “backup” wrench when tightening fasteners that use a nut and a bolt.
- Re-connect the ABS wire harnesses (if equipped) making sure they are “snapped” in place.
- Use a new gasket between the catalytic converter and center exhaust tube.
- Connect and adjust the parking brake cables.
- When re-installing the rear rotors to the hubs, make sure the mating surfaces are clean. If
  necessary, use a wire brush to remove any rust or debris. This will help prevent rotor run-
  out / brake judder. Also, make sure you correctly “index” the rotor to the hub.

5. Perform a rear wheel alignment.

Section 3. Hazards Identification

Physical State and Appearance
Solid. (Gray paste.)

Emergency Overview
EMERGENCY OVERVIEW.
May cause eye, nose and throat irritation. Repeated or prolonged contact with skin may cause irritation leading to dermatitis. Product contains oximes which are possible skin sensitizers. Avoid breathing vapor or mist. Avoid contact with skin and eyes. Keep container tightly closed. Wash thoroughly after handling. Use only with adequate ventilation.

Exposure to water or air moisture will gradually generate Methyl Ethyl Ketoxime (MEKO), a by-product from curing. See MEKO’s exposure limits in Section 2.

Routes of Entry
Eye contact. Inhalation. Dermal.

Potential Acute Health Effects

- **Eyes**: Direct contact may cause slight irritation with redness and swelling. MEKO, a by-product is severe eye irritant.
- **Skin**: Repeated or prolonged contact with skin may cause irritation leading to dermatitis. Product contains oximes which are possible skin sensitizers.
- **Inhalation**: Vapors or mists are irritating to the eyes, mucous membranes and upper respiratory tract. Overexposure to the vapor of the reaction by-product, MEKO vapors, can cause drowsiness, and may irritate nose and throat.
- **Ingestion**: Not available.

Continued on Next Page
### Section 4. First Aid Measures

| Eye Contact | Check for and remove any contact lenses. In case of contact, immediately flush eyes with plenty of water for at least 15 minutes. Get medical attention immediately. |
| Skin Contact | Remove product from skin with dry cloth or towel, and wash exposed area with soap and water. |
| Inhalation | If inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention. |
| Ingestion | Do NOT induce vomiting unless directed to do so by medical personnel. Never give anything by mouth to an unconscious person. Get medical attention if symptoms appear. |
| Notes to Physician | Not available. |

### Section 5. Fire Fighting Measures

| Flammability of the Product | May be combustible at high temperature. |
| Auto-Ignition Temperature | Not available. |
| Flash Points | Not available. |
| Flammable Limits | Not available. |
| Fire Hazards in Presence of Various Substances | Slightly flammable to flammable in presence of open flames and sparks. |
| Explosion Hazards in Presence of Various Substances | None known. |
| Fire Fighting Media and Instructions | SMALL FIRE: Use DRY chemical powder. LARGE FIRE: Use water spray, fog or foam. Do not use water jet. |
| Protective Clothing (Fire) | Be sure to use an approved/certified respirator or equivalent. |
| Special Remarks on Fire Hazards | No additional remark. |
| Special Remarks on Explosion Hazards | Container explosion may occur under fire conditions. |

### Section 6. Accidental Release Measures

| Small Spill and Leak | Use appropriate tools to put the spilled solid in a convenient waste disposal container. Finish cleaning by spreading water on the contaminated surface and dispose of according to local and regional authority requirements. |
| Large Spill and Leak | Disposal of collected material, residues, and cleanup materials may be governmentally regulated. Observe all applicable local, state, and federal waste management regulations. Wear appropriate protective equipment. Shovel spilled material into an appropriate waste disposal container. Dispose of collected material, residues, and cleanup materials by observing all applicable federal, state and local waste management regulations. |
Section 7. Handling and Storage

Handling
Avoid contact with eyes. Wash thoroughly after handling. Manipulate in a well-ventilated area or under an adequate fume hood.

Storage
Keep container tightly closed. Keep container in a cool, well-ventilated area.

Section 8. Exposure Controls, Personal Protection

Engineering Controls
Use process enclosures, local exhaust ventilation, or other engineering controls to keep airborne levels below recommended exposure limits. If user operations generate dust, fume or mist, use ventilation to keep exposure to airborne contaminants below the exposure limit.

Personal Protection

<table>
<thead>
<tr>
<th>Eyes</th>
<th>Safety glasses.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Body</td>
<td>Long sleeves work apparel must be worn. Depending on conditions of use, chemically resistant plastic or rubber apron should be worn.</td>

Continued on Next Page
**Section 10. Stability and Reactivity**

The product is stable.

Avoid exposure to air and moisture until ready to use because they cause curing and MEKO vapors form gradually.

Reactive with oxidizing agents, acids. Water or moisture.

MEKO forms from moisture or water exposure. See Section 5 for thermal decomposition.

Will not occur.

**Section 11. Toxicological Information**

**Toxicity to Animals**

Acute oral toxicity (LD50): >5000 mg/kg [Rat]. (Siloxanes and Silicones, di-Me, hydroxy terminated.).

Acute Inhalation Effects: Rat, inhalation, TC50: >4.8mg/l (MEKO, by-product)

Contains material which may cause damage to the following organs: lungs, skin, eye, lens or cornea, nose/sinuses, throat.

**Chronic Effects on Humans**

CARCINOGENIC EFFECTS: Carbon black is classified 2B (Possible for human) by IARC, classified none by OSHA and classified A4 (Not classifiable for human or animal) by ACGIH.

Studies of workers by the IARC has found that exposure to carbon black in industrial uses such as rubber, printing ink, paint manufacturing is negligible (Summary Of Data Reported and Evaluation, IARC VOL 65 (1996) p.149.)

Also, this product contains fumed silica, titanium dioxide, calcium carbonate, and carbon black which are considered to be hazardous by inhalation as respirable dust. This product does not generate dust under normal handling conditions.

**Other Toxic Effects on Humans**

The following subchronic and chronic effects are known for curing by-product methylethylketoxime (MEKO) from animal testing:

In a subchronic oral toxicity animal study, MEKO produced an adverse effect upon red blood cells (anemia). In an acute dermal animal study, 200 mg/kg cause mild hematologic (blood) effects.

In chronic inhalation studies damage to the olfactory epithelium in nasal passage ways was observed at 15, 75 and 375 ppm concentration levels in both male and female rats and mice. The effect was minimal at 15 ppm. Evidence of recovery was found after cessation of exposure. The no observed effect level (NOEL) was determined to be 3 ppm.

Carcinogenicity: Chronic lifetime inhalation studies at high concentrations of MEKO observed liver carcinomas in male rats and mice late in life. These carcinomas were noted to be statistically increased for males at a MEKO concentration of 375 ppm. The No Observed Adverse Effect Level (NOAEL) was determined to be 75 ppm.

Teratogenicity: MEKO was not determined to be reproductive toxin (Rats 200 mg/kg).

Mutagenicity: MEKO was determined to be non-mutagenic in Drosophila Genetic Study. MEKO in
in-vivo chromosome aberration study was found not to induce chromosomal aberration. (Rats 1200 mg/kg).

| Special Remarks on Chronic Effects on Humans | The relevance of MEKO studies of animals to humans is uncertain as of now. Until more data is available, exposure levels should be maintained as low as achievable. |
| Special Remarks on Other Toxic Effects on Humans | Not available. |

**Section 12. Ecological Information**

| Ecotoxicity | Not available. |
| BOD5 and COD | Not available. |
| Biodegradable/OECD | Not available. |
| Mobility | Not available. |
| Products of Degradation | These products are carbon oxides (CO, CO2) and water. Some metallic oxides. |
| Toxicity of the Products of Biodegradation | The product itself and its products of degradation are not toxic. |
| Special Remarks on the Products of Biodegradation | Not available. |

**Section 13. Disposal Considerations**

| Waste Information | Follow applicable Federal, state, and local regulations. |
| Waste Stream | Non-categorized by EPA or RCRA. |
| Consult your local or regional authorities. |

**Section 14. Transport Information**

| DOT Classification | Not a DOT controlled material (United States). |
| | Not regulated. |
| Marine Pollutant | Not available. |
| Special Provisions for Transport | Not applicable. |
| ADR/RID Classification | Not controlled under ADR (Europe). |
| IMO/IMDG Classification | Not controlled under IMDG. |
| ICAO/IATA Classification | Not controlled under IATA. |

**Section 15. Regulatory Information**

| HCS Classification | HCS Class: Irritating substance. |
| U.S. Federal Regulations | TSCA 8(b) inventory: All ingredients of this product are in compliance with TSCA requirements. SARA 302/304/311/312 extremely hazardous substances: No products were found. SARA 302/304 emergency planning and notification: No products were found. SARA 302/304/311/312 hazardous chemicals: No products were found. SARA 311/312 MSDS distribution - chemical inventory - hazard: No products were found. Clean Water Act (CWA) 307: No products were found. |

## State Regulations

- New Jersey: Carbon Black
- Louisiana RTK reporting list: Carbon Black
- California prop. 65: This regulation requires a warning for California Proposition 65 Chemicals under the statute. The California Proposition 65 Chemical contained in this product are: Toluene/108-88-3: <0.1%.

## Section 16. Other Information

### Label Requirements

May cause eye, nose and throat irritation. Repeated or prolonged contact with skin may cause irritation leading to dermatitis. Product contains oximes which are possible skin sensizers. Avoid breathing vapor or mist. Avoid contact with skin and eyes. Keep container tightly closed. Wash thoroughly after handling. Use only with adequate ventilation.

3. HAZARDS IDENTIFICATION

Emergency overview: Extended contact with this material may cause irritation to the skin, eyes, and mucous membranes. Primary Routes of Exposure: eyes, skin, and inhalation. Irritating fumes and gases may be released upon thermal processing or during combustion.

Potential health effects:
- **Skin**: SKIN CONTACT: This product may cause irritation to the skin. Prolonged and/or repeated skin contact with this product may cause irritation/dermatitis.
- **Eyes**: EYE CONTACT: This product may cause irritation to the eyes.
- **Inhalation**: INHALATION: Fumes released during thermal processing may irritate respiratory system, skin and eyes.
- **Ingestion**: INGESTION: Ingestion may cause gastrointestinal tract discomfort or damage.

Target organs: Skin.
4. FIRST AID MEASURES

First aid

Skin  For minor exposures, wash thoroughly with soap and clean water. In situations involving considerable skin contact, place the contaminated person in a deluge shower for at least 15 minutes. Remove contaminated clothing to prevent further skin exposure and dispose of properly. Get medical attention if irritation persists.

Eye  Immediately flush eyes with water for at least 15 minutes, while holding eyelids open. Seek medical attention at once.

Inhalation  Move person to non-contaminated air. If the affected person is not breathing, apply artificial respiration. Seek medical attention.

Ingestion  Do not induce vomiting. If person is conscious and can swallow, immediately give two glasses of water. Seek immediate medical attention. Do not give anything by mouth to an unconscious or convulsing person.

Notes to physician  Treat symptomatically and supportively. Contact Bostik to determine whether any additional information is available.

Medical conditions aggravated by exposure  Dermatitis.

5. FIRE FIGHTING MEASURES

Extinguishing media  Use dry chemical, carbon dioxide, or foam. Water spray (foo).

Dust explosion hazard  None Known

Sensitivity to mechanical impact  None Known

Sensitivity to static discharge  None Known

Unusual fire & explosion hazards  Product may burn and produce toxic gases in a fire.

Fire fighting equipment/instructions  Firefighters should wear full protective clothing including self contained breathing apparatus.

Flash point  > 482 °F (> 250 °C)

6. ACCIDENTAL RELEASE MEASURES

Emergency action  Appropriate safety measures and protective equipment should be used. See Section 8. Do not discharge to lakes, streams, ponds, or sewers. Dispose of in compliance with local, state, and federal regulations.

Spill or leak procedure  Scraper grease and deposit into appropriate containers for disposal.

7. HANDLING & STORAGE

Storage  Store in a clean, dry area. Keep containers closed.

Empty container precaution  Attention! Follow label warnings even after container is emptied since empty containers may retain product residues. Do not reuse empty container without professional cleaning for food, clothing, or products for human or animal consumption, or where skin contact can occur.

8. EXPOSURE CONTROLS / PERSONAL PROTECTION

Engineering controls  Ventilation is not normally required.

Eye protection  Wear safety glasses with side shields.

Skin and body protection  Wear protective impervious gloves to minimize skin exposure. Work clothing sufficient to prevent all skin contact should be worn, such as coveralls and long sleeves.

Respiratory protection  Not normally needed.

OWNER’S LETTER – (warranty extension notification)

Dear Nissan Owner:

Nissan is committed to providing the highest levels of product quality and customer satisfaction. On some model year 2002-2005 Nissan Altima and 2004-2005 Nissan Maxima vehicles, there is a possibility that corrosion of the rear sub-frame may occur. Corrosion is most likely in cold climates where heavy salting of roads is common practice in freezing conditions. A mixture of road salt and water can promote corrosion in the rear sub-frame bushings of some vehicles. In severe cases, cracking of the rear sub-frame may occur, which may result in a knocking noise coming from the rear of the vehicle. The performance or handling characteristics of your vehicle are not affected and it is safe to drive your vehicle.

What Nissan Will Do

To ensure the highest levels of customer satisfaction, Nissan is extending the warranty for cracking of the rear sub-frame due to corrosion to a total of 13 years from the original in-service date with unlimited mileage on all model year 2002-2005 Nissan Altima and 2004-2005 Nissan Maxima vehicles.

Our records indicate your vehicle is registered in one of the “salt” states where road salt is common and corrosion may therefore occur. To prevent corrosion before it happens, Nissan is also offering to repair or, if necessary, replace the rear sub-frame on vehicles currently registered in these states.

What You Should Do

Remove the sticker located on the bottom of this letter and place it on the cover of your Nissan Warranty Information Booklet to remind you of the warranty extension, should you ever need to use it. No additional action is required on your part at this time.

Over the next 8 months, based on the model year of your vehicle, you can expect to be notified by Nissan to bring your vehicle to a Nissan dealer for repair at no cost to you. Because this condition is more likely to occur on vehicles with increased exposure to heavy salt usage, Nissan will begin to notify owners of the earliest model year vehicles first.

Rest assured that it is safe to continue to drive your vehicle. However, if you should experience a “knocking” noise coming from the rear of your vehicle or, if during routine maintenance, a service technician (Nissan or non-Nissan) should observe any cracking of the rear sub-frame during the extended warranty period, please contact your Nissan dealer. Your Nissan dealer will inspect and repair your vehicle, as needed, at no cost to you.

Thank you for your cooperation. We are indeed sorry for any inconvenience this may cause you.

Nissan North America, Inc.

NOTICE: The coverage period of the Nissan New Vehicle Limited Warranty applicable to all model year 2002-2005 Nissan Altima and 2004-2005 Maxima vehicles is extended to 13 years from the original in-service date/unlimited mileage for cracking of the rear sub-frame due to corrosion only. The warranty, including all terms, limitations and conditions, otherwise remains unchanged.

Nissan North America WB05-038 December, 2005

Owner’s Letter
OWNER’S LETTER – (vehicle repair notification)

Dear Nissan owner:

Previously, Nissan notified you, as an owner of a model year 2002-2005 Nissan Altima or 2004-2005 Nissan Maxima, of the possibility that corrosion of the rear sub-frame might occur. At that time, the warranty on your vehicle was extended to a total of 13 years from the original in-service date with unlimited mileage for cracking of the rear sub-frame due to corrosion.

Our records indicate that your vehicle is (or was) previously registered in one of the “salt” states where corrosion is most likely to occur. To prevent corrosion before it happens, Nissan is now also offering to repair or, if necessary, replace the rear sub-frame on vehicles such as yours which are currently, or have in the past been registered in one of these states.

What You Should Do

Contact your Nissan dealer at your earliest convenience and arrange an appointment to have this repair completed. This service should take approximately 4 hours to complete, but you should plan to leave your vehicle at the dealership for a full day. Please bring this notice with you when you keep your service appointment.

Corrosion of the rear sub-frame does not affect the performance or handling characteristics of your vehicle, but may cause a knocking noise in the rear of the vehicle. While waiting for your appointment date, please be assured that it is safe to drive your vehicle.

Thank you for your cooperation. We are indeed sorry for any inconvenience this may cause you.
