**2011-2013 Jetta Sedan – Rattle From Door, Accessory Side  
Sills Installed**

---

When diagnosing a rattle from the door, check for the installation of accessory side sills. If side sills are installed, verify sills are correctly located as per installation instructions available on ServiceNet under Technician References>Accessories>Side Sills. Improperly located side sills can contact bottom of door frame and cause a rattle noise.
