Subject: VAS-PC Brand V19.47 does not support engine diagnosis for the 2013 A8 3.0L TDI (CPNA)

Date: Mar. 06, 2013

1.0 Description

The current Audi Brand DVD V19.47 does not have any Guided Fault Finding function tests for the CPNA 3.0L TDI engine for the 2013 A8.

Please refer to the following information for the workaround procedures until this concern is repaired on Brand DVD V19.48.

2.0 Workaround procedures

- Connect the VAS tester to the vehicle and run Guided Fault Finding as usual.
- The tester will automatically select the vehicle (A8), but it will ask you for the year.
- Instead of selecting the year, back out using the right “**Arrow**” button.
- This screen will show the list of all of the Audi vehicles.
- Select “**Audi Q7**”.
- Select “**2013 (D)**”.
- Select “**SUV**”.
- Select “**CNRB 3.0L TDI / 176kW**”.
- It is now ready to run the “Vehicle System Test”.
- All of the Guided Fault Finding function tests for the 3.0L TDI engine are now available.

ATTENTION!

Use these workaround steps **ONLY** to repair “P” codes and/or work on the engine for this vehicle!

If other non-engine related systems need to be diagnosed and repaired, please use the 2013 A8 TDI as a selection since these GFF function test are available. This is only for engine diagnosis and repair!!
