**2005-2008 Jetta, Rabbit with 2.5L Engine – Engine Will Not Crank/Start, No ECM Communication, Fault 01314**

When diagnosing a no crank/no start concern with no ECM communication, be sure to check ECM 30 power circuit to T121/62. Perform voltage drop between battery positive post and this pin at ECM with key on. If excessive voltage drop is measured, check for break in wire at splice located 6-18 inches from ECM.
