• The engine warning light is on after engine replacement.

- The engine is not running roughly. However, the engine control module, J623 (01), is storing one or more of the following engine misfire fault codes: DTCs P0300 P0304.
- The fault codes occur at light load, between 8% and 14% accelerator pedal position.

Technical Background

The programmed values for the misfiring recognition are not automatically reset by deleting the memory once.

Technical Service Bulletin

Service

- Use Guided Fault Finding (GFF) to clear adaptations: *GFF* >> *Powertrain* >> "Engine Code" >> *OBD* >> Engine Electronics, Functions >> Resetting Misfire Adaptations.
- If the program "Resetting Misfire Adaptations" is not available in GFF, delete the entry with the VAS PC tester via the collective services. The entry must be deleted three times in a row (within 28 seconds) to remove the programmed values.

Tip: Try to reproduce the condition so that it can be clearly assigned to this bulletin. The model/type and engine code must match exactly. Otherwise, this solution will not work and repeat repairs may necessary. In such cases, the warranty claim may be rejected.
