TABLE OF CONTENTS

General Information	1
Decimal and Metric Equivalents	1
Tightening Torque	2
Warnings and Cautions	4
Vehicle Identification.....	9
Vehicle Identification Number (VIN) Location	9
VIN Decoder	10
Vehicle Data Label.....	11
Sales Codes	12
Engine Codes	12
Transmission Codes	12
Vehicle Lifting	13
Front and Rear Mounting Points.....	13
Engine Mechanical – 2.0L CAED.....	14
General, Technical Data	14
Engine Number Location	14
Engine Data	15
Engine Assembly – 2.0L CAED	15
Fastener Tightening Specifications.....	15
Crankshaft, Cylinder Block – 2.0L CAED	16
Cylinder Block Bearing Shell Identification	16
Bearing Cap Bearing Shell Identification	18
Fastener Tightening Specifications.....	19
Crankshaft Dimensions	19
Piston Ring End Gaps	19
Piston Ring Clearance.....	19
Piston and Cylinder Dimensions.....	19
Accessory Assembly Bracket Tightening Specifications.....	20
Sealing Flange Tightening Specifications.....	21
Crankshaft Assembly Tightening Specifications	22
Cylinder Head, Valvetrain – 2.0L CAED	23
Fastener Tightening Specifications.....	23
Valve Dimensions	24
Compression Pressures	24
Cylinder Head Removal Specifications	25

Cylinder Head Tightening Specifications	26
Cylinder Head Cover Removal Specifications	27
Cylinder Head Cover Tightening Specifications	28
Crankcase Ventilation Tightening Specification	29
Upper Timing Chain Cover Tightening Specification	29
Lower Timing Chain Cover for 15 Bolts Tightening Specifications	30
Lower Timing Chain Cover for 8 Bolts Tightening Specifications	31
Lubrication – 2.0L CAED	32
Fastener Tightening Specifications	32
Upper Oil Pan Tightening Specifications	32
Oil Pan Tightening Specifications	33
Oil Separator Tightening Specification	33
Cooling System – 2.0L CAED	34
Fastener Tightening Specifications	34
Coolant Pump Tightening Specification	35
Fuel Supply – 2.0L CAED	36
Fastener Tightening Specifications	36
Turbocharger, G-Charger – 2.0L CAED	37
Fastener Tightening Specifications	37
Turbocharger Tightening Specifications	38
Exhaust System – 2.0L CAED	39
Fastener Tightening Specifications	39
Fuel Injection and Ignition – 2.0L CAED	40

Piston Ring Clearance	49

Piston and Cylinder Dimensions.....	49
Cylinder Head, Valvetrain – 3.0L CTUA.....	50
Fastener Tightening Specifications.....	50
Compression Checking Specifications	51
Valve Dimensions	51
Left Timing Chain Cover Tightening Specifications	52
Right Timing Chain Cover Tightening Specifications.....	53
Lower Timing Chain Cover Tightening Specifications	54
Cylinder Head Tightening Specifications	55
Camshaft Guide Frame Tightening Specifications	56
Left Cylinder Head Cover Tightening Specification	57
Right Cylinder Head Cover Tightening Specification.....	58
Lubrication – 3.0L CTUA.....	59
Fastener Tightening Specifications.....	59
Upper Oil Pan Tightening Specifications	60
Oil Pan Tightening Specifications	61
Cooling System – 3.0L CTUA.....	62
Fastener Tightening Specifications.....	62
Coolant Pump Tightening Specification.....	63
Fuel Supply – 3.0L CTUA.....	64
Fastener Tightening Specifications.....	64
Turbocharger, G-Charger – 3.0L CTUA.....	64
Fastener Tightening Specifications.....	64
Exhaust System, Emission Controls – 3.0L CTUA.....	65
Fastener Tightening Specifications.....	65
Left Exhaust Manifold Tightening Specifications	66
Right Exhaust Manifold Tightening Specifications.....	67
Multiport Fuel Injection – 3.0L CTUA.....	68
Technical Data	68
Fastener Tightening Specifications.....	68
Lower Intake Manifold Tightening Specifications.....	69
Control Valve Control Module Tightening Specifications	70
Ignition – 3.0L CTUA.....	71

Piston and Cylinder Dimensions.....	81
Cylinder Head, Valvetrain – 4.0L CEUC	82
Fastener Tightening Specifications.....	82
Compression Checking Specifications	82
Valve Dimensions	83
Left Timing Chain Cover Tightening Specifications	84
Right Timing Chain Cover Tightening Specifications.....	85
Lower Timing Chain Cover Tightening Specifications	86
Cylinder Head Loosening	87
Cylinder Head Tightening Specifications	88
Camshaft Guide Frame Tightening Specifications	89
Lubrication – 4.0L CEUC	90
Fastener Tightening Specifications.....	90
Upper Oil Pan Tightening Specifications	91
Lower Oil Pan Tightening Specifications	92
Oil Cooler Tightening Specifications.....	93
Cooling System – 4.0L CEUC	93
Fastener Tightening Specifications.....	93
Fuel Supply – 4.0L CEUC.....	95
Fastener Tightening Specifications.....	95
Turbocharger, G-Charger – 4.0L CEUC	96
Fastener Tightening Specifications.....	96
Left Turbocharger Tightening Specifications	97
Right Turbocharger Tightening Specifications	98
Turbocharger Support Tightening Specifications.....	99
Exhaust System, Emission Controls – 4.0L CEUC.....	100
Fastener Tightening Specifications.....	100
Multiport Fuel Injection – 4.0L CEUC	101

Warnings and Cautions

WARNINGS

- Some repairs may be beyond your capability. If you lack the skills, tools and equipment, or a suitable workplace for any procedure described in this manual, we suggest you leave such repairs to an authorized dealer service department or other qualified shop.
- Do not reuse any fasteners that have become worn or deformed during normal use. Many fasteners are designed to be used only once and become unreliable and may fail when used a second time. This includes, but is not limited to, nuts, bolts, washers, self-locking nuts or bolts, circlips and cotter pins. Always replace these fasteners with new parts.
- Never work under a lifted car unless it is solidly supported on stands designed for the purpose. Do not support a car on cinder blocks, hollow tiles or other props that may crumble under continuous load. Never work under a car that is supported solely by a jack. Never work under the car while the engine is running.
- If you are going to work under a car on the ground, make sure the ground is level. Block the wheels to keep the car from rolling. Disconnect the battery negative (-) terminal (ground strap) to prevent others from starting the car while you are under it.

- Never run the engine unless the work area is well ventilated. Carbon monoxide kills.
- Remove rings, bracelets and other jewelry so they cannot cause electrical shorts, get caught in running machinery, or be crushed by heavy parts.
- Tie back long hair. Do not wear a necktie, a scarf, loose clothing, or a necklace when you work near machine tools or running engines. If your hair, clothing, or jewelry were to get caught in the machinery, severe injury could result.
- Do not attempt to work on your car if you do not feel well. You increase the danger of injury to yourself and others if you are tired, upset, or have taken medication or any other substance that may keep you from being fully alert.
- Illuminate your work area adequately but safely. Use a portable safety light for working inside or under the car. Make sure the bulb is enclosed by a wire cage. The hot filament of an accidentally broken bulb can ignite spilled fuel, vapors or oil.
- Use a suitable container to catch draining fuel, oil, or brake fluid. Do not use food or beverage containers that might mislead someone into drinking from them. Store flammable fluids away from fire hazards. Wipe up spills at once, but do not store oily rags which can ignite and burn spontaneously.
- Always observe good workshop practices. Wear goggles when you operate machine tools or work with battery acid. Wear gloves or other protective clothing whenever the job requires working with harmful substances.
- Greases, lubricants and other automotive chemicals contain toxic substances, many of which are absorbed directly through the skin. Read the manufacturer's instructions and warnings carefully. Use hand and eye protection. Avoid direct skin contact
- Disconnect the battery negative (-) terminal (ground strap) whenever you work on the fuel or electrical system. Do not smoke or work near heaters or other fire hazards. Keep an approved fire extinguisher handy.
- Friction materials (such as brake pads or shoes or clutch discs) contain asbestos fibers or other friction materials. Do not create dust by grinding, sanding, or cleaning with compressed air. Avoid breathing dust. Breathing any friction material dust can lead to serious diseases and may result in death.

WARNINGS *(cont'd)*

- Batteries give off explosive hydrogen gas during charging. Keep sparks, lighted matches and open flame away from the top of the battery. If hydrogen gas escaping from the cap vents is ignited, it ignites the gas trapped in the cells and causes the battery to explode.
- Connect and disconnect battery cables, jumper cables or a battery charger only with the ignition off. Do not disconnect the battery while the engine is running.
- Do not quick-charge the battery (for boost starting) for longer than one minute. Wait at least one minute before boosting the battery a second time.
- Do not allow battery charging voltage to exceed 16.5 volts. If the battery begins producing gas or boiling violently, reduce the charging rate. Boosting a sulfated battery at a high charging rate can cause an explosion.
- The A/C system is filled with chemical refrigerant, which is hazardous. The A/C system should be serviced only by trained technicians using approved refrigerant recovery/recycling equipment, trained in related safety precautions, and familiar with regulations governing the discharging and disposal of automotive chemical refrigerants.
- Do not expose any part of the A/C system to high temperatures such as open flame. Excessive heat increases system pressure and may cause the system to burst.
- Some aerosol tire inflators are highly flammable. Be extremely cautious when repairing a tire that may have been inflated using an aerosol tire inflator. Keep sparks, open flame or other sources of ignition away from the tire repair area. Inflate and deflate the tire at least four times before breaking the bead from the rim. Completely remove the tire from the rim before attempting any repair.
- Some cars are equipped with a Supplemental Restraint System (SRS) that automatically deploys airbags and pyrotechnic seat belt tensioners in the event of a frontal or side impact. These are explosive devices. Handled improperly or without adequate safeguards, they can be accidentally activated and cause serious injury.
- The ignition system produces high voltages that can be fatal. Avoid contact with exposed terminals and use extreme care when working on a car with the engine running or the ignition on.

- Place jack stands only at locations specified by manufacturer. The vehicle lifting jack supplied with the vehicle is intended for tire changes only. Use a heavy duty floor jack to lift the vehicle before installing jack stands.
- Battery acid (electrolyte) can cause severe burns. Flush contact area with water, seek medical attention.
- Aerosol cleaners and solvents may contain hazardous or deadly vapors and are highly flammable. Use only in a well ventilated area. Do not use on hot surfaces (such as engines or brakes).
- Do not remove coolant reservoir or radiator cap with the engine hot. Burns and engine damage may occur.

CAUTIONS

- If you lack the skills, tools and equipment, or a suitable workshop for any procedure described in this manual, we suggest you leave such repairs to an authorized dealer or other qualified shop.
- Before starting a job, make certain that you have all the necessary tools and parts on hand. Read all the instructions thoroughly and do not attempt shortcuts. Use tools appropriate to the work and use only replacement parts meeting original specifications. Makeshift tools, parts and procedures will not make good repairs.
- Use pneumatic and electric tools only to loosen threaded parts and fasteners. Never use these tools to tighten fasteners, especially on light alloy parts. Always use a torque wrench to tighten fasteners to the tightening torque specification listed.
- Be mindful of the environment and ecology. Before you drain the crankcase, find out the proper way to dispose of the oil. Do not pour oil onto the ground, down a drain, or into a stream, pond or lake. Dispose of in accordance with Federal, State and Local laws.
- The control module for the Anti-lock Brake System (ABS) cannot withstand temperatures from a paint-drying booth or a heat lamp in excess of 95°C (203°F) and should not be subjected to temperatures exceeding 85°C (185°F) for more than two hours.
- Before doing any electrical welding on cars equipped with ABS, disconnect the battery negative (-) terminal (ground strap) and the ABS control module connector.
- Always make sure the ignition is off before disconnecting battery.

(CAUTIONS cont'd on next page)

CAUTIONS *(cont'd)*

- Label battery cables before disconnecting. On some models, battery cables are not color coded.
- Disconnecting the battery may erase fault code(s) stored in control module memory. Check for fault codes prior to disconnecting the battery cables.
- If a normal or rapid charger is used to charge the battery, disconnect the battery and remove it from the vehicle to avoid damaging paint and upholstery.
- Do not quick-charge the battery (for boost starting) for longer than one minute. Wait at least one minute before boosting the battery a second time.
- Connect and disconnect a battery charger only with the battery charger switched off.
- Sealed or “maintenance free” batteries should be slow-charged only, at an amperage rate that is approximately 10% of the battery’s ampere-hour (Ah) rating.
- Do not allow battery charging voltage to exceed 16.5 volts. If the battery begins producing gas or boiling violently, reduce the charging rate. Boosting a sulfated battery at a high charging rate can cause an explosion.

General, Technical Data

Engine Number Location

The engine number (engine code and serial number) is located on the top front of the cylinder block, below the right cylinder head (➡). Engine codes beginning with C are four-digit. The first 3 digits of the engine code indicate the displacement and the mechanical structure of the engine. The fourth digit describes the engine output and torque.

The engine number -arrow B- is visible, if the housing for the charge air cooler is removed. The first 3 digits of the engine code -arrow A- are visible, when the engine cover is removed. The engine serial number ("engine code" and "serial number") is located on the front of the cylinder block on the left side -arrow B-. The first 3 digits of the engine code stand for displacement and the mechanical structure of the engine. They are stamped in the cylinder block, including the serial number. The fourth digit describes the engine output and torque and depends on the Engine Control Module (ECM).

ENGINE MECHANICAL – 3.0L CPNB (TDI)

General, Technical Data

Engine Number Location

The engine number (“engine code” and “serial number”) is located on the left side in the front under the high pressure pump toothed belt (➡). In addition, a sticker with “engine code” and “serial number” is affixed to the intake manifold. Engine codes beginning with C are four-digit. The first 3 digits of the engine code indicate the displacement and the mechanical structure of the engine. The fourth digit describes the engine output and torque. The four digit engine code is on the type plate, vehicle data label and engine control module.

²⁾ Bolt strength rating 10.9. There is no limit to the number of times steel bolts may be used.

³⁾ Aluminum bolts can only be used twice. Mark the bolts by making two notches (X) with a chisel after they have been used the first time. To prevent damaging the bolts when marking them, do not clamp them in a vise. Insert the bolts in a ½" drive 14 mm socket clamped into a vise. Do not use bolts that have been marked with an X.

REAR FINAL DRIVE – 0BC, 0BD, 0BE, 0BF

General, Technical Data – 0BC

Rear Final Drive Identification

0BC final drive and 0AR (1➡). Code and build date (2➡).

Rear Final Drive –
0BC, 0BD, 0BE, 0BF

Final Drive Identification

Final Drive 0BC (➡) and 0AR

Note: 0AR is always on the rear final drive housing.
The changes to the housing are what differentiate
the 0BC final drive from the 0AR final drive.

Final Drive Identification (cont'd)

Rear Final Drive –
0BC, 0BD, 0BE, 0BF

The locations of the threaded holes (➡) for attaching the cross member to the rear final drive are also different.

The 0BC final drive has 4 threaded holes (➡) in its housing, used for attaching the cross member. In addition to this, there is an additional threaded hole under the flange/driveshaft used for attaching the final drive to the subframe.

Rear Final Drive Code and Date of Manufacture

Example:	JKS	15	03	07
	Code letters	Day	Month	Year of manufacture 2007

When installing a new rear final drive unit, the final drive code, the PR number and the vehicle engine code must be verified in the Parts Catalog. This is the only to assure the correct allocation.
