Title: ProStar Battery Drain (Parasitic Drain) with Sleeper Refrigerator

Applies To: All ProStar with Sleepers and Optional Refrigerator

DESCRIPTION

This is a reminder to dealers and customers to shut off the refrigerator in the sleeper if the vehicle is shut down for more than 12 hours. The refrigerator may be shut off using the thermostat located inside the refrigerator ensuring the dial is turned to O. You will notice a click and the light will shut off in the refrigerator.

Leaving the refrigerator on while the engine is not running over an extended time may cause low battery voltage and vehicle may not start.

On future orders, we have made load shedding or low voltage disconnect a required option to help ensure battery voltage is maintained.
