Advanced Field Action Communication – N0202072013

Chrysler Group LLC (Chrysler) announced a safety recall on certain **2013 model year (JS) Dodge Avenger and Chrysler 200 (sedan and convertible)** vehicles equipped with the non-Partial Zero Emissions Vehicle (PZEV) fuel tank assembly.

The above vehicles may experience fuel leakage at the rear of the vehicle and/or engine stall due to a fuel tank control valve that was damaged during the manufacturing process.

Chrysler will conduct a voluntary safety recall on all affected vehicles to inspect the control valve located in the fuel tank. Vehicles found with a damaged control valve will have the fuel tank assembly and vapor canister replaced.

Dealers will be notified of the launch of this safety recall by way of established methods when parts become available.

We ask that you please take the time to ensure that your personnel are aware of this communication and are prepared to execute a customer friendly process for inquiries on involved vehicles.
