Subject: **Street-legal HP titanium exhaust system S 1000 RR (K46): 77 11 8 529 218**

To: All BMW Motorrad USA dealer Parts and Service Managers

After long-term testing of motorcycles fitted with the HP titanium exhaust system, the emissions exceed the allowed limits defined in current CARB regulations (California Air Resources Board). Due to this result BMW Motorrad USA will no longer offer this system for sale in the USA.

Therefore the part numbers 77 11 8 529 218 as well as enable code 13 61 8 531 006 are blocked and cannot be ordered any longer.

The ETK will be corrected accordingly in future releases to delete this part for U.S. applications.

Should your dealership have an HP titanium exhaust system in stock, please contact your dealer services to arrange a manual AFA return to avoid accruals against the bi-annual return program.

Note that **no** other current exhaust systems, respectively sport silencers for other BMW models or the standard exhaust system of HP4 are affected by this particular testing result.

- The standard exhaust system of HP4 is similar to the accessory HP street-legal exhaust system for S 1000 RR but it has a larger catalytic converter and does meet the CARB requirements. It is unfortunately not possible to offer the exhaust system of HP4 as an accessory for S 1000 RR (K46) owners due to additional software required that is not developed.

Please be informed that future accessory exhaust systems will be CARB compliant and available for distribution in all 50 States.

Best regards,

BMW Motorrad Aftersales
