Triton Pontoon "BT" models

Triton Trailers is excited to introduce a new addition of four new pontoon trailer models to the Triton Pontoon trailer line up. Triton Trailers is now offering the "BT" style cantilever lift pontoon trailer in a 20-1BT, 20-2BT, 22-1BT, and the 22-2BT models. These trailers will fit the same size pontoon boat decks as the regular models.

These new trailers are "BT" style trailers because they are designed to be used with pontoon boats with "big transoms." A number of new pontoon boats being sold on the market are now featuring larger transom mounts and shrouds. These shrouds ahead of the motor, under the deck, can be over 9 feet long coming forward. In some ways, it needs to be treated as a partial third pontoon underneath when you are selecting a trailer. Inside the large transom the boat manufacturers are placing a number of items inside them including the gas tank.

As you can see below, the illustrations of the rear of the BT models have been changed compared to the regular pontoon models. The parts going across the trailer have been eliminated or moved forward that would have interfered with the shrouds. The taillights have also been turned 90 degrees to give more clearance room. The opening created goes all the way forward to the rear axle. Dual pairs of pivoting swing arms are being used to give the support needed and to keep the cantilever lift working smoothly.

These models are a great way to take more market share from the float on or bunk style trailer market. If you have any questions feel free to contact us at Triton.

Sincerely,
Sales & Marketing Staff
