

CHASSIS MODULE RELOCATION PREP KIT

WORK SMARTSM

Freightliner Trucks offers chassis module relocation

Freightliner trucks is now offering a prep kit to relocate the chassis module on M2 and SD vehicles. This option is currently available to order in SpecPro for chassis start dates beginning February 3, 2014.

What is it?

- This new option contains a prep kit to relocate the chassis module from the frame rail to the inside of the cab

Information for Truck Equipment

Manufacturers (TEM's):

- The prep kit will contain a harness and a bracket that will both be shipped loose in the cab
- The bracket is designed so it can move around easily and be installed easily so TEM's can mount it to where it is most convenient to them in the cab
- This option will require a 2 inch hole to be punched into the cab floor
- The harness provided will have a grommet attached to seal off the hole

Why is it important?

- This feature provides additional protection for the chassis module by keeping it out of the way of debris and moisture

Key Benefits:

- Additional protection for chassis module

Availability:

- M2106, M2112, 108SD, 114SD

Where do I find this information?

Data Code

33U-007 – Chassis module jumper and bracket for body builder to relocate the chassis module into the cab
