Technical Service Bulletin

Technical Background

The fault occurs with ATF temperature below 60° C. Check for this temperature range in the extended environmental conditions of the diagnosis protocol. This TSB only applies if the ATF level is correct and there are no leaks.

Production Solution

New software in the TCM addresses the condition.

Service

Before proceeding, verify that the *Condition* and *Technical Background* match the concern. If any other faults or conditions exist, this bulletin does not apply because the SVM update will not work.

SVM Update Instructions

- 1. Follow all instructions in TSB 2011732: 00 Software Version Management (SVM), operating instructions.
- 2. Update the TCM using the SVM action code as listed in the table below if necessary.

Note: Read the table below carefully and make sure to use the correct SVM action code.
