Title	X351 Seat Memory Switch Number 1 Stuck High
Category	Body
Last modified	15-Apr-2013 00:00:00
Symptom	101000 Seating
Content	<p><u>Issue:</u> Right Hand Seat memory switch pack button number 1 stuck on, will log DTC within the Module: Memory #1 Switch signal stuck high B1C03 is stored. Vehicle may present with a flat battery.</p> <p><u>Cause:</u> The switch pack is incorrectly mounted within the surrounding bezel on the door casing which results in a foul condition button to surround.</p> <p><u>Action:</u> Remove the seat memory switch pack from the surrounding bezel and refit torque tightening the two upper screws first to remove the clash with bottom edge of the switch to the surrounding bezel. Test to confirm number 1 switch does not stick.</p> <p>Assured VIN# V39181.</p>
