Wipers Cycle Several Times, Then Park in the Middle of the Windshield  
2004-2006 Chevrolet Colorado  
2004-2006 GMC Canyon

The following diagnosis might be helpful if the vehicle exhibits the symptom(s) described in this PI.

**Condition/Concern:**

Windshield wipers begin to operate when the ignition is turned on, cycle one to three times and then park somewhere on the windshield. Concern may be intermittent and DTC B3718 stored in the BCM. This may be the result of a terminal connection at the BCM and/or the wiper motor or an open wiper park circuit between the BCM and wiper motor.

**Recommendation/Instructions:**

Inspect for an open in circuit 196 (yellow wire) between the BCM and the wiper motor. Using a fused jumper wire in place of circuit 196 can be done as a test. If the condition is corrected with the fused jumper wire, locate the open in circuit 196 (yellow wire).

Please follow this diagnostic or repair process thoroughly and complete each step. If the condition exhibited is resolved without completing every step, the remaining steps do not need to be performed.
