Title: Bendix Stability Control -Customer Satisfaction Performance Improvement on specific Emergency/Tanker applications

Applies To: DuraStar and Workstar models

DESCRIPTION

Some DuraStar and WorkStar models built March 2009 to August 2011 with Bendix Stability Control included a tuning program that has been updated to a "Medium" tuning. Currently these units have a "High" tuning and can cause what the customer perceives as an unwarranted stability event on low speed turns. There is not a safety concern with the high tuning, this is classified and described as an annoyance to the driver during the event and **ONLY** VIN's listed below qualify for programming based on application and CG calculations.

SYMPTOMS

No DTC's. Units will go into a stability control event on low speed turns, loaded or unloaded.

Prior to programming inspect the YAW/ LAS mounting to verify it is in the correct location and properly secured to the frame or mounting bracket

RESOLUTION

Create a case file with the Chassis Group. Refer to this IKNOW document in the description section. Tech Service will log into your computer while you are connected to the unit to make the modifications. Please try to use a hard wired internet connection for this process. This will help the speed of the down load.
